The mean departures from normal temperatures are based on records from stations that have ten or more years of observations. [a], 1 day missing. [b], 2 days missing, etc.

[Continued from page 49]

AUGUST.—The favorable weather conditions of the two preceding months continued through August, being the third consecutive month with precipitation above the normal. The precipitation was well distributed both geographically and throughout the month. At the close of the month grains and grasses were excellent.

SEPTEMBER.—There was less than the normal precipitation, but due to ample subsoil mosture, no harm resulted. Threshing and other farm work made rapid progress. Frosts damaged some late flax and corn. By the close of the month fall plowing and the seeding of winter rye were well advanced, but in some sections soil conditions were too dry for best results.

OCTOBER.—Under favorable weather conditions farming operations and other outdoor work made rapid progress. Occasional high winds delayed threshing somewhat, and too dry ground made fall plowing and seeding somewhat difficult. However, more than the usual acreage of fall plowing was accomplished. There was much marketing of grain and livestock, threshing was completed, and corn harvesting well advanced. Due to abundant feed on harvested fields and on pastures and ranges, livestock ranged freely and were in excellent condition at the close of the month.

NOVEMBER.—Mostly mild and pleasant weather prevailed throughout November, and to those engaged in outdoor activities was one of the most agreeable of record. As a result of these favorable conditions outdoor work of all kinds made rapid progress. Fall plowing continued in many parts of the State until near the end of the month. Practically all farm work, including corn husking, was completed. Winter rye was generally up to good stand and color.

DECEMBER.—The month opened with somewhat cloudy and stormy weather, with temperature below normal. A similar condition prevailed from the 17th to the 20th, otherwise the weather of the month was mild and pleasant. Farm activities consisted of the marketing of grain and livestock. Cattle, horses and sheep ranged freely on pastures, ranges and harvested fields, saving much feed, and at the close of the month were in excellent condition. Highways were generally excellent.

Climatological Summary, 1928

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

VOL. XXXVIII   BISMARCK, N. D., JANUARY, 1929   No. 1

GENERAL SUMMARY

January, 1929, was the third coldest of record in the climatological history of North Dakota, the two colder being 1907 and 1916. There was more than the normal snowfall, which combined with the low mean temperature and occasional high winds made the weather for the month unfavorable for livestock and outdoor work. The snowfall was quite well distributed geographically and throughout the month, the stormiest period extending from the 9th to the 18th inclusive. Most main highways remained open, but many smaller trails and cross-roads were blocked.

TEMPERATURE

The mean temperature for the State was -4.8°, or 9.7° below the normal, and 17.8° lower than the average for January, 1928. The highest mean reported was 1.9° at Marmarth, Slope County; the lowest was -12.8° at Hansboro, Towner County. The highest temperature reported was 42° at Hettinger, Adams County, on the 8th; the lowest was -42° at Eckman, Bottineau County, on the 25th and at Willow City, Bottineau County, on the 25th and 26th. The greatest monthly range of temperature was 79° at Dickinson, Stark County; the least was 51° at Grafton, Walsh County. The greatest daily range in temperature was 62° at Fessenden, Wells County on the 11th and at Jamestown, Stutsman County on the 8th

PRECIPITATION

The average precipitation for the State was 0.63 inch, or 0.09 inch above the normal, and 0.42 inch more than the average for January, 1928. The greatest monthly amount reported was 1.82 inches at Dickinson, Stark County; the least was a trace at Tioga, Williams County. The greatest amount recorded in any 24 consecutive hours was 0.80 inch at Maddock, Benson County on the 10th. The average snowfall was 9.2 inches. The average number of days with 0.01 inch or more of precipitation was 6.

AURORAS

Auroras were observed at Rugby on the 2d; at Foxholm and Sharon on the 3d; at Rugby on the 6th; at Oakes on the 8th; at Devils Lake, Foxholm and Rugby on the 10th; at Grand Forks on the 11th; at Howard on the 12th; at Foxholm on the 13th; and at Bottineau on the 14th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ᵃ, ᵇ, ᶜ, appearing in the table indicate number of days missing; for example, ᵇ represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Dogden Butte, near Butte; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.; Metigoshe, Bottineau; Stowers, Lemmon, S. D.

Daily Precipitation for January, 1929

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

VOL. XXXVIII   BISMARCK, N. D., FEBRUARY, 1929   No. 2

GENERAL SUMMARY

The weather of the month was cold and generally more or less stormy, and unfavorable for outdoor work and for livestock. As a result of these unfavorable conditions marketing of grain on farms was delayed and much yard feeding of livestock, particularly cattle and sheep, was necessary, with slight losses in some sections. Ice harvest was delayed by too cold weather and was only completed near the close of the month. Moderately heavy snows occurred from the 10th to the 17th, inclusive, and light snows occurred on the 3-4th, 21-23d, and 27-28th. The main highways were mostly open to auto traffic, but many crossroads were impassable.

TEMPERATURE

The mean temperature for the State was 2.8°, or 5.1° below the normal, and 16.0° lower than the average for February, 1928. The highest mean reported was 10.0° at Marmarth, Slope County; the lowest was -3.0° at Hansboro, Towner County. The highest temperature reported was 44° at Carson, Grant County, on the 25th; the lowest was -44° at Eckman, Bottineau County, Oakes, Dickey County and Velva, McHenry County, on the 19th. The greatest monthly range of temperature was 84° at Willow City, Bottineau County; the least was 59° at Park River, Walsh County. The greatest daily range in temperature was 73° at Dunn Center, Dunn County on the 20th.

PRECIPITATION

The average precipitation for the State was 0.29 inch, or 0.20 inch below the normal, and 0.19 inch more than the average for February, 1928. The greatest monthly amount reported was 0.80 inch at Langdon, Cavalier County, Linton, Emmons County and Power, Richland County; the least was a trace at four stations. The greatest amount recorded in any 24 consecutive hours was 0.80 inch at Linton, Emmons County on the 9th. The average snowfall was 3.3 inches. The average number of days with 0.01 inch or more of precipitation was 4.

AURORAS

Auroras were observed at Bottineau on the 5th; at Bottineau, Foxholm and Rugby on the 6th; at Devils Lake and McLeod on the 7th; at Foxholm on the 8th; at Bottineau on the 9th; at Rugby on the 11th and 16th; at Arnegard on the 17th; at Bottineau on the 18th and 19th; at Oakes on the 21st; at Rugby on the 26th; at Foxholm, Grand Forks, Metigoshe, Napoleon, Rugby, Sharon, Stanton and Velva on the 27th; and at Sharon on the 28th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ᵃ, ᵇ, ᶜ, appearing in the table indicate number of days missing; for example, ᵇ represents two days, etc.

†Also on other dates. ‡‡Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Dogden Butte, near Butte; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.; Metigoshe, Bottineau; Stowers, Lemmon, S. D.

Daily Precipitation for February, 1929

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

VOL. XXXVIII BISMARCK, N. D., MARCH, 1929 No. 3

GENERAL SUMMARY

The weather during the month was mild and pleasant, there having been but four higher mean temperatures for March in the climatological history of the State. The precipitation was nearly the normal, was fairly well distributed both geographically and throughout the month. Livestock ranged freely throughout the month, saving much feed. Spring work on farms was begun during the last decade

TEMPERATURE

The mean temperature for the State was 30.5°, or 7.9° above the normal, and 2.4° higher than the average for March, 1928. The highest mean reported was 35.8° at Fort Yates, Sioux County; the lowest was 25.7° at Hansboro, Towner County. The highest temperature reported was 79° at Carson, Grant County, on the 29th; the lowest was −15° at Hansboro, Towner County, on the 7th, and at Steele, Kidder County, on the 8th. The greatest monthly range of temperature was 87° at Hansboro, Towner County; the least was 45° at Beach, Golden Valley County. The greatest daily range in temperature was 54° at Jamestown, Stutsman County on the 10th.

PRECIPITATION

The average precipitation for the State was 0.78 inch, or 0.05 inch below the normal, and 0.24 inch more than the average for March, 1928. The greatest monthly amount reported was 3.00 inches at Mott, Hettinger County; there was none at Pembina, Pembina County. The greatest amount recorded in any 24 consecutive hours was 1.40 inches at Jamestown, Stutsman County on the 13th. The average snowfall was 5.3 inches. The average number of days with 0.01 inch or more of precipitation was 5.

AURORAS

Auroras were observed at Linton on the 4th; at Bismarck, Carson, Devils Lake, Ellendale, Foxholm, Velva and Willow City on the 7th; at Devils Lake, Dogden Butte, Ellendale, Foxholm and Stanton on the 8th; at Linton on the 9th; at Bottineau, McKinney and Willow City on the 11th; at Bottineau and Westhope on the 12th; at Arnegard, Berthold Agency, Bottineau, Carson, Ellendale, Foxholm, Grand Forks, Hettinger, Howard, Lamoine, McKinney, Metigoshe, Minot, Napoleon, Oakes, Rugby, Sharon, Stanton, Steele, Veva, Williston, Willow City and Moorhead, Minn. on the 15th; at Arnegard, Bismarck, Bottineau, Carson, Dogden Butte, Ellendale, Foxholm, Grand Forks, Lamoine, McLeod, Oakes, Pettibone, Rugby, Westhope, Williston and Willow City on the 16th; at McLeod, Westhope and Williston on the 17th; at Foxholm, Sharon and Willow City on the 20th; at Devils Lake on the 21st; at Rugby and Towner on the 27th; at Carson, Ellendale, Grand Forks and Richardton on the 28th; and at Bottineau and Devils Lake on the 30th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Dogden Butte, near Butte; **Energy**, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard; **McKinney**, Tolley; Howard, Grenora; Metigoshe, Bottineau; Stowers, Lemmon, S. D.

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

VOL. XXXVIII BISMARCK, N. D., APRIL, 1929 No. 4

GENERAL SUMMARY

The month opened with temperatures considerably above the normal, but after the 5th readings averaged near or slightly below normal. The coldest period at almost all stations occurred between the 6th and 12th. For the month as a whole temperatures averaged above normal in the extreme eastern and southern sections of the State and below normal over the central and western districts. The precipitation was well distributed throughout the month, there being no prolonged wet or dry periods. Amounts were below normal in the western and southeastern sections and slightly above normal from the south-central section northward and northeastward to the Canadian Line. Snowfall was light and very little fell after the 10th. Except for some slight delay, due to wet ground in the eastern part of the State, farm work made good progress. The seeding of spring wheat was well advanced by the close of the month and grasses and foliage made fair to good growth. F.J.B.

TEMPERATURE

The mean temperature for the State was 41.5°, or 0.2° below the normal, and 5.6° higher than the average for April, 1928. The highest mean reported was 49.6° at Fort Yates, Sioux County; the lowest was 32.8° at Melville, Foster County. The highest temperature reported was 85° at Hankinson, Richland County, on the 3d; the lowest was -9° at Epping, Williams County, on the 1st. The greatest monthly range of temperature was 77° at Epping, Williams County; the least was 53° at Mott, Hettinger County. The greatest daily range in temperature was 54° at Lisbon, Ransom County on the 4th.

PRECIPITATION

The average precipitation for the State was 1.31 inches, or 0.07 inch below the normal, and 0.43 inch more than the average for April, 1928. The greatest monthly amount reported was 3.03 inches at Fullerton, Dickey County; the least was 0.04 at Fairfield, Billings County. The greatest amount recorded in any 24 consecutive hours was 2.00 inches at Crosby, Divide County on the 7th. The average snowfall was 3.4 inches. The average number of days with 0.01 inch or more of precipitation was 6.

AURORAS

Auroras were observed at Carson and Howard on the 1st; at Willow City on the 3d; at Fessenden and Metigoshe on the 15th; and at Bottineau, Carson, Grand Forks and Williston on the 27th..

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Dogden Butte, near Butte; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle Power, Leonard; McKinney, Tolley; Howard, Grenora; Metigoshe, Bottineau; Stowers, Lemmon, S. D.

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

Vol. XXXVIII Bismarck, N. D., May, 1929 No. 5

GENERAL SUMMARY

The month opened with temperatures, particularly at night, too low for best germination of spring wheat and other grains. Field work was delayed in some sections during the first decade by frozen ground. The temperature during second decade was rather low, but small grains stooled heavily and made fair progress. The third decade was the warmest, but the average was generally below normal. The precipitation was nearly the normal, and was fairly well distributed geographically. Periods of marked precipitation were as follows, 10th, 15th, 19th and 25th to 30th, inclusive. Pastures were somewhat short in some sections, but livestock was generally in excellent condition. Much highway construction was begun during the month and made good progress.

TEMPERATURE

The mean temperature for the State was 49.1°, or 3.5° below the normal, and 9.1° lower than the average for May, 1928. The highest mean reported was 49.6° at Hankinson, Richland County; the lowest was 40.2° at Melville, Foster County. The highest temperature reported was 92° at McKinney, Renville County, on the 13th; the lowest was 8° at McKinney, Renville County, on the 5th. The greatest monthly range of temperature was 84° at McKinney, Renville County; the least was 56° at Wilton, McLean County. The greatest daily range in temperature was 60° at Larimore, Grand Forks County on the 24th.

PRECIPITATION

The average precipitation for the State was 2.99 inches, or 0.44 inch above the normal, and 1.84 inches more than the average for May, 1928. The greatest monthly amount reported was 7.29 inches at Marmarth, Slope County; the least was 0.65 inch at Mellville, Foster County. The greatest amount recorded in any 24 consecutive hours was 3.08 inches at Alpha and Beach, both in Golden Valley County on the 26th. The average snowfall was 0.4 inches. The average number of days with 0.01 inch or more of precipitation was 7.

AURORAS

Auroras were observed at Foxholm on the first; at Carson on the 2d; at Howard on the 12th; at Rugby on the 15th; at Epping on the 24th; and at Rugby on the 30th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ᵃ, ᵇ, ᶜ, appearing in the table indicate number of days missing; for example, ᵇ represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Dogden Butte, near Butte; **Energy**, Underwood; **Grand Forks**, University; **Lamoine**, Tuttle; Power, Leonard; McKinney, Tolley; Howard, Grenora; Metigoshe, Bottineau; Stowers, Lemmon, S. D.

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

VOL. XXXVIII   BISMARCK, N. D., JUNE, 1929   No. 6

GENERAL SUMMARY

Soil conditions at the beginning of June were favorable in all sections of the state and crop conditions at that time were excellent. Extreme dryness, however, characterized the weather of the month except in the extreme west portion, and as a result of this dryness droughty conditions prevailed, and crops deteriorated rapidly. Corn, however, of which there is an increased acreage, progressed rapidly and an excellent crop is indicated. Pastures in all sections were badly in need of rain, and the hay crop in many sections was more or less light. Livestock, however, was in good condition at the close of the month.

TEMPERATURE

The mean temperature for the state was 61.4°, or 1.4° below the normal, and 3.2° higher than the mean for June, 1928. The highest mean reported was 66.8° at New England, Hettinger County; the lowest was 56.4° at Langdon, Cavalier County. The highest temperature reported was 98° at Pembina, Pembina County, on the 15th and 17th, at Wahpeton, Richland County on the 11th, and at three other stations on the 29th; the lowest was 21° at Hansboro, Towner County on the 12th. The greatest monthly range of temperature was 68° at Hansboro, Towner County; the least was 45° at Beach, Golden Valley County. The greatest daily range in temperature was 58° at Melville, Foster County on the 8th.

PRECIPITATION

The average precipitation for the State was 1.44 inches, or 2.06 inches below the normal, and 3.63 inches less than the average for June, 1928. The greatest monthly amount reported was 7.99 inches at Beach, Golden Valley County; the least was 0.15 inch at Pembina, Pembina County. The greatest amount recorded in any 24 consecutive hours was 4.13 inches at Beach, Golden Valley County, on the 7th. The average number of days with 0.01 inch or more of preciptation was 7.

AURORAS

Auroras were observed at Foxholm, Sharon and Velva on the 30th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Dogden Butte, near Butte; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle Power, Leonard; McKinney, Tolley; Howard, Grenora; Metigoshe, Bottineau; Stowers, Lemmon, S. D.

Daily Precipitation for June, 1929

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

Vol. XXXVIII BISMARCK, N. D., JULY, 1929 No. 7

GENERAL SUMMARY

From a crop standpoint, the weather during the month was very unfavorable, droughty conditions prevailing in nearly all sections of the state. The average precipitation was but 1.27 nches, and with but one exception (1894) the driest of record for July. The temperature averaged decidedly above the normal, there being but eight warmer Julys in the climatological history of the state. As a result of these unfavorable conditions crops deteriorated, especially late sown small grains, corn, flax and potatoes. Pastures suffered severely, rain being needed in all parts of the state at the close of the month.

TEMPERATURE

The mean temperature for the state was 70.6°, or 3.1° above he normal, and 3.2° higher than the mean for July, 1928. The highest mean reported was 76.6° at Melville, Foster County; the lowest was 64.2° at Hansboro, Towner County. The highest temperature reported was 109° at four stations on he 25th or 26th; the lowest was 34° at Pembina, Pembina County on the 2d. The greatest monthly range of temperature was 70° at Linton, Emmons County, and at Max, McLean County; the least was 54° at Fullerton, Dickey County, and Langdon, Cavalier County. The greatest daily range in temperature was 57° at Linton, Emmons County on the 29th.

PRECIPITATION

The average precipitation for the state was 1.27 inches, or .34 inches below the normal, and 3.78 inches less than the average for July, 1928. The greatest monthly amount reported was 3.62 inches at Grafton, Walsh County; there was none at Portal, Burke County. The greatest amount recorded in any 24 consecutive hours was 2.75 inches at Devils Lake, Ramsey County, on the 11th. The average number of days with 0.01 nch or more of preciptation was 5.

AURORAS

Auroras were observed at Bottineau, Crosby and Towner on he 1st; at Crosby on the 2d; at Foxholm on the 3d; at Crosby on the 4th; at Bottineau, Eckman, Foxholm, Rugby, Towner, Westhope and Williston on the 5th; at Devils Lake on the 0th; at Crosby on the 11th; at Bottineau and Towner on the 2th; at Towner on the 13th; at Arnegard, Eckman, Ellendale, Foxholm, Rugby and Trotters on the 14th; at Bottineau, Crosby and Rugby on the 15th; at Rugby and Sharon on the 6th; at Crosby and Foxholm on the 17th; at Crosby on the 8th; and at Howard on the 23d.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ᵃ, ᵇ, ᶜ, appearing in the table indicate number of days missing; for example, ᵇ represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Dogden Butte, near Butte; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle Power, Leonard; McKinney, Tolley; Howard, Grenora; Metigoshe, Bottineau; Stowers, Lemmon, S. D.

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

VOL. XXXVIII BISMARCK, N. D., AUGUST, 1929 No. 8

GENERAL SUMMARY

The weather throughout North Dakota during August was unusually dry and hot. The mean temperature has been exceeded but four times, and the average precipitation was the lowest in the climatological history of the state. The rainfall during June, July and August this year is also the lowest of record for those months. As a result of these conditions late harvest and threshing made rapid progress. Yields of small grains were somewhat better then expected, but considerably below the normal. Soil conditions were unfavorable for fall plowing and pastures were dry, rain being badly needed in all sections of the state.

TEMPERATURE

The mean temperature for the state was 68.5°, or 3.1° above the normal, and 3.7° higher than the mean for August, 1928. The highest mean reported was 72.9° at Wilton, McLean County; the lowest was 62.5° at Powers Lake, Burke County. The highest temperature reported was 106° Maddock, Benson County on the 31st; the lowest was 26° at Steele, Kidder County on the 14th. The greatest monthly range of temperature was 76° at Maddock, Benson County; the least was 53° at Moorhead. The greatest daily range in temperature was 62° at Towner, McHenry County on the 16th.

PRECIPITATION

The average precipitation for the state was 0.77 inch, or 1.51 inches below the normal, and 2.53 inches less than the average for August, 1928. The greatest monthly amount reported was 2.06 inches at Stanton, Mercer County; there was only a trace at Portal, Burke County. The greatest amount recorded in any 24 consecutive hours was 1.80 inches at Carson, Grant County, on the 1st. The average number of days with 0.01 inch or more of preciptation was 4.

AURORAS

Auroras were observed at Dcgden Butte on the 2d; at Larimore on the 14th; at Howard on the 15th; at Arnegard on the 17th; and at Towner on the 18th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ᵃ, ᵇ, ᶜ, appearing in the table indicate number of days missing; for example, ᵇ represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

††Post-office addresses of these stations are: Berthold Agency, Elbowoods; Dogden Butte, near Butte; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard; McKinney, Tolley; Howard, Grenora; Metigoshe, Bottineau; Stowers, Lemmon, S. D.

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

ol. XXXVIII Bismarck, N. D., September, 1929 No. 9

GENERAL SUMMARY

The weather during September was generally favorable for utdoor work. The temperature was decidedly below the normal, the mean for the month having been lower on but four ears in the climatological history of the state.. The precipitaion was nearly normal, but the greater portion occurred durng the last decade. During the fore part of the month pasures suffered from drought and fall plowing and the seeding of inter rye were accomplished with considerable difficulty, due o soil dryness. Conditions improved greatly during the last ecade and rapid progress was made in this activity. Liveock was in generally good condition at the close of the month.

TEMPERATURE

The mean temperature for the state was 52.7°, or 3.7° below ne normal, and 1.2° lower than the mean for September, 1928. he highest mean reported was 58.2° at Wahpeton, Richland ounty; the lowest was 47.1° at Hansboro, Towner County. he highest temperature reported was 105° Maddock, Benson ounty on the 1st; the lowest was 12° at Lisbon, Ransom ounty on the 17th. The greatest monthly range of temperature as 90° at Maddock, Benson County; the least was 59° at unseith, Rollette County. The greatest daily range in temperure was 55° at New England, Hettinger County on the 19th.

PRECIPITATION

The average precipitation for the state was 1.65 inches, or 01 inch above the normal, and 0.72 inch more than the erage for September, 1928. The greatest monthly amount ported was 4.31 inches at Hankinson, Richland County; e least was 0.21 inch at Mayville, Traill County. The greatt amount recorded in any 24 consecutive hours was 2.16 ches at Willow City, Bottineau County, on the 3d. The erage number of days with 0.01 inch or more of precipitation as 5.

AURORAS

Auroras were observed at Howard and Williston on the 7th; Foxholm, Rugby and Trotters on the 8th; at Arnegard gden Butte, Foxholm and Moorhead on the 9th; at Foxholm cLeod, Pettibone, Towner and Williston on the 10th; at Carn, Foxholm, Pettibone and Williston on the 11th; at Willisn on the 12th; at Ellendale and Rugby on the 21st; and at lendale on the 22d.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Dogden Butte, near Butte; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard; McKinney, Tolley; Howard, Grenora; Metigoshe, Bottineau; Stowers, Lemmon, S. D.

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

VOL. XXXVIII   BISMARCK, N. D., OCTOBER, 1929   No. 10

GENERAL SUMMARY

The month, taken as a whole, was mild and pleasant. During the first decade weather favorable for farm work prevailed, and rapid progress was made in fall plowing, late seeding of winter rye, potato digging and corn picking. General rains, very beneficial, prevailed from the 9th to 11th, inclusive. Farm work continued uninterruptedly throughout the second decade after the storm, and during the third decade up to the 28th. From the 28th to the close of the month general snows covered the state, stopping all farm work, blockading many highways and necessitating much yard feeding of livestock.

TEMPERATURE

The mean temperature for the state was 46.8°, or 3.0° above the normal, and 1.2° lower than the mean for October, 1928. The highest mean reported was 54.8° at Marmarth, Slope County; the lowest was 43.0° at Langdon, Cavalier County. The highest temperature reported was 88° at Steele, Kidder County on the 17th; the lowest was 10° at Steele, Kidder County on the 23d. The greatest monthly range of temperature was 78° at Steele, Kidder County; the least was 46° at Marmarth, Slope County. The greatest daily range in temperature was 63° at Max, McLean County on the 14th.

PRECIPITATION

The average precipitation for the state was 1.85 inches, or 0.85 inch above the normal, and 1.44 inches more than the average for October, 1928. The greatest monthly amount reported was 4.75 inches at Oakes, Dickey County; the least was 0.28 inch at Max, McLean County. The greatest amount recorded in any 24 consecutive hours was 1.62 inches at Oakes, Dickey County, on the 31st. The average snowfall was 5.1 inches. the greatest monthly snowfall was 18.0 inches at Hansboro, Towner County. The average number of days with 0.01 inch or more of precipitation was 6.

AURORAS

Auroras were observed at Eckman, Foxholm, Howard, and Linton on the 2d; at Foxholm and Williston on the 5th; at Bottineau, Howard, Rugby and Westhope on the 6th; at Arnegard, Bottineau, Foxholm, Howard, Napoleon, Rugby and Williston on the 7th; at Foxholm, Pettibone and Williston on the 8th; at Foxholm and Williston on the 9th; at Rugby on the 10th; at Westhope on the 12th; at Foxholm, Oakes and Sharon on the 13th; at Rugby on the 14th; at Bottineau on the 15th; at Rugby on the 23d; and at Ellendale, Foxholm and Howard on the 24th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Dogden Butte, near Butte; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle Power, Leonard; McKinney, Tolley; Howard, Grenora; Metigoshe, Bottineau; Stowers, Lemmon, S. D.

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

Vol. XXXVIII Bismarck, N. D., November, 1929 No. 11

GENERAL SUMMARY

Heavy snows at the opening of the month stopped most farm vork, blocked traffic on most sideroads and delayed traffic on nain highways and necessitated much yard feeding of livestock. Mild temperature during the latter part of the first decade and nost of the second decade reduced the snow covering rapidly, llowing corn picking and grain marketing to be resumed, and llowing livestock to range freely on harvested fields. Stormy veather with lower temperature prevailed during the last decade.

TEMPERATURE

The mean temperature for the state was 24.8°, or 1.8° below he normal, and 6.2° lower than the mean for November, 1928. The highest mean reported was 29.8° at Fort Yates, Sioux ounty; the lowest was 18.2° at Hansboro, Towner County. The highest temperature reported was 70° at Arnegard, McKen- ie County on the 16th; the lowest was -21° at Langdon, avalier County on the 28th. The greatest monthly range of emperature was 85° at Arnegard, McKenzie County; the least vas 50° at Powers Lake, Burke County. The greatest daily ange in temperature was 50° at Melville, Foster County on the 9th.

PRECIPITATION

The average precipitation for the state was 0.53 inch, or .05 inch below the normal, and 0.05 inch more than the verage for November, 1928. The greatest monthly amount eported was 1.60 inches at Fessenden, Wells County, and at Langdon, Cavalier County; the least was a trace at Stowers, Adams County. The greatest amount recorded in any 24 conecutive hours was 1.14 inches at Fessenden, Wells County on he 1st. The average snowfall was 5.2 inches. The average umber of days with 0.01 inch or more of precipitation was 5.

AURORAS

Auroras were observed at Rugby and Willow City on the 1st; t Bottineau, Foxholm and Rugby on the 2d; at Napoleon and Oakes on the 3d; at Foxholm on the 4th; at Bottineau and Williston on the 5th; at Foxholm on the 7th; at Bottineau on he 9th; at Rugby on the 20th and 26th; at Bottineau on the 28th; and at Linton on the 30th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing: for example, ^{b} represents two days, etc.

†Also on other dates. ‡‡Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Dogden Butte, near Butte; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard; McKinney, Tolley; Howard, Grenora; Metigoshe, Bottineau; Stowers, Lemmon, S. D.

Daily Precipitation for November, 1929

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

Vol. XXXVIII Bismarck, N. D., December, 1929 No. 12

GENERAL SUMMARY

The temperature averaged below normal in all sections of the state, except at some stations in the extreme east and extreme south where the least snow fell. The coldest weather occurred in the central and west-central sections where there was a heavy snow cover. The snowfall in most sections was somewhat above normal and almost all of it fell from the 1st to the 17th. It was followed by a severe cold snap from the 17th to the 22d. Livestock suffered considerably during the third week due to the cold weather and heavy snow cover and many highways were blocked with drifted snow. Mild temperature, without precipitation prevailed from the 23d to the 31st, reducing the snow covering and improving highways. Livestock ranged freely during the closing week and considerable marketing was done. F.J.B.

TEMPERATURE

The mean temperature for the state was 12.5°, or 0.5° below the normal, and 8.2° lower than the mean for December, 1928. The highest mean reported was 16.4° at Lisbon, Ransom County; the lowest was 4.2° at Hansboro, Towner County. The highest temperature reported was 59° at Park River, Walsh County on the 30th; the lowest was -38° at Dunn Center, Dunn County on the 18th. The greatest monthly range of temperature was 91° at Park River, Walsh County; the least was 61° at Dogden Butte, McLean County, and at Hillsboro, Trail County. The greatest daily range in temperature was 51° at Melville, Foster County on the 2d.

PRECIPITATION

The average precipitation for the state was 0.81 inch, or 0.27 inch above the normal, and 0.53 inch more than the average for December, 1928. The greatest monthly amount reported was 2.10 inches at Cando, Towner County; the least was 0.10 inch at Amenia, Cass County. The greatest amount recorded in any 24 consecutive hours was 1.11 inches at McClusky, Sheridan County on the 16th. The average snowfall was 9.9 inches. The average number of days with 0.01 nch or more of precipitation was 5.

AURORAS

Auroras were observed at Arnegard, Bottineau, Crosby, Devils Lake, Ellendale, Foxholm, Grand Forks, Howard, Larimore, Napoleon, Oakes, Rugby, Tagus, Trotters, Willow City and Williston on the 3d; at Bottineau, Crosby, Dogden Butte, Ellendale, Fessenden, Foxholm, Grand Forks, Hettinger, Howard, Linton, Minot, Napoleon, Oakes, Rugby, Sharon, Tagus, Trotters, Velva, and Williston on the 4th; at Bottineau, Crosby, Devils Lake, Ellendale, Linton, McLeod, Trotters, Velva and Williston on the 5th; at Foxholm, Trotters and Westhope on the 7th; at Williston on the 17th; at Arnegard, Foxholm and Trotters on the 21st; at Foxholm, Howard, Rugby, Sharon, Steele, Trotters, Westhope and Williston on the 22d; at Williston on the 25th; at Linton on the 26th; and at Williston on the 30th and 31st.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ª, ᵇ, ᶜ, appearing in the table indicate number of days missing; for example, ᵇ represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Dogden Butte, near Butte; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle Power, Leonard; McKinney, Tolley; Howard, Grenora; Metigoshe, Bottineau; Stowers, Lemmon, S. D.

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

Vol. XXXIX   Bismarck, N. D., January, 1930   No. 1

GENERAL SUMMARY

The month was cold and deficient in moisture. Only five times in the 39 years of record for January has a lower mean temperature for the state been recorded. The month opened with moderate temperatures and the last week was mild, but cold weather was experienced continuously from the 6th to the 22d. Sub-zero temperatures were the rule even in the afternoons during most of this period. Only a few stations, mostly in the southwestern part of the state, reported precipitation above the normal, but the heavy snowfall during December and the cold January weather caused livestock to suffer considerably and much yard feeding was necessary. Very little outdoor work was accomplished, but the ice harvest was well under way by the end of the month. Many highways, particularly in the northern part of the state, were blocked with drifted snow.

F. J. B.

TEMPERATURE

The mean temperature for the state was -1.9°, or -6.8° below the normal, and 2.9° higher than the mean for January, 1929. The highest mean reported was 5.0° at New England, Hettinger County; the lowest was -9.0° at Hansboro, Towner County. The highest temperature reported was 41° at Powers Lake, Burke County on the 1st; the lowest was -43° at Eckman, Bottineau County on the 9th. The greatest monthly range of temperature was 78° at Eckman, Bottineau County; the least was 52° at Cando, Towner County, Pembina, Pembina County and Portal, Burke County. The greatest daily range in temperature was 52° at Eckman, Bottineau County on the 3d.

PRECIPITATION

The average precipitation for the state was 0.29 inch, or 0.25 inch below the normal, and 0.34 inch less than the average for January, 1929. The greatest monthly amount reported was 1.41 inches at Bowman, Bowman County; there was none at Hansboro, Towner County, Mayville, Traill County and Portal, Burke County. The greatest amount recorded in any 24 consecutive hours was 0.80 inch at Lamoine, Kidder County on the 24th. The average snowfall was 2.7 inches and the greatest monthly amount was 11.0 inches at Mott, Hettinger County. The average number of days with 0.01 inch or more of precipitation was 4.

AURORAS

Auroras were observed at Linton and Williston on the 3d; at Arnegard, Bottineau, Linton, Rugby, Trotters and Williston on the 4th; at Williston on the 6th; at Foxholm, Rugby and Sanish on the 7th; at Sanish on the 8th; at Bottineau on the 9th; at Dogden Butte, Foxholm and Rugby on the 18th; at Rugby on the 20th; at Foxholm on the 27th; at Bottineau and Linton on the 29th; at Howard and Williston on the 31st.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used i determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

††Post-office addresses of these stations are: Berthold Agency, Elbowoods; Dogden Butte, near Butte; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle Power, Leonard; McKinney, Tolley; Howard, Grenora; Metigoshe, Bottineau; Stowers, Lemmon, S. D.

VOL. XXXIX BISMARCK, N. D., FEBRUARY, 1930 No. 2

GENERAL SUMMARY

Mild weather prevailed in most sections throughout the month, the mean temperature (21.7°) being with but one exception the highest of record for February. Heavy snow covering at the beginning of the month necessitated considerable yard feeding, but mild temperatures thereafter caused rapid diminution of covering and livestock ranged freely on ranges and harvested fields. Heavy snows with decidedly lower temperature during the last week blocked highways and railways, and caused great shrinkage in livestock.

TEMPERATURE

The mean temperature for the state was 21.7°, or 15.8° above the normal, and 18.9° higher than the mean for February, 1929. The highest mean reported was 29.6° at Marmarth, Slope County; the lowest was 12.4° at Hansboro, Towner County. The highest temperature reported was 63° at Fort Yates, Sioux County on the 19th; the lowest was -30° at Grafton, Walsh County on the 15th, at Hansboro, Towner County on the 14th and 15th, and at Pembina, Pembina County on the 14th. The greatest monthly range in temperature was 82° at Dunseith, Rolette County; the least was 58° at Langdon, Cavalier County. The greatest daily range in temperature was 60° at Fort Yates, Sioux County on the 15th.

PRECIPITATION

The average precipitation for the state was 1.18 inches, or 0.69 inch above the normal, and 0.89 inch more than the average for February, 1929. The greatest monthly amount reported was 2.50 inches at Hansboro, Towner County and at Langdan, Cavalier County; the least was 0.11 inch at Tagus, Mountrail County. The greatest amount recorded in any 24 consecutive hours was 1.50 inches at Hansboro, Towner County on the 25th. The average snowfall was 11.7 inches. The average number of days with 0.01 inch or more of precipitation was 6.

AURORAS

Auroras were observed at Foxholm and Williston on the 2d; at Linton on the 8th; at Devils Lake, Ellendale, Grand Forks, Howard, Rugby, Sharon and Tagus on the 13th; at Crosby, Howard and Rugby on the 14th; at Crosby on the 15th; at Crosby, Epping, Foxholm, Howard and Willow City on the 16th; at Foxholm, Oakes and Willow City on the 18th; at Bottineau on the 20th; at Devils Lake on the 21st; at Arnegard, Bismarck and Trotters on the 22d; at Bismarck, McLeod and Williston on the 23d; at Bottineau on the 24th; at Velva and Washburn on the 26th; and at Foxholm on the 28th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used i[n] determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Dogden Butte, near Butte; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard; McKinney, Tolley; Howard, Grenora; Metigoshe, Bottineau; Stowers, Lemmon, S. D.

ORRIS W. ROBERTS, Meteorologist

VOL. XXXIX BISMARCK, N. D., MARCH, 1930 No. 3

GENERAL SUMMARY

Cold and stormy weather prevailed at the beginning of the month. After the 2d, however, temperatures averaged somewhat above the normal with the exception of the 20th when sub-zero weather occurred at most stations. Less precipitation fell during the month than in any other March since statewide records began 50 years ago. None of the stations recorded an inch of precipitation for the entire month and 30 stations reported less than 0.01 inch. Many highways were blocked with snow and much yard feeding of livestock was necessary at the opening of the month but the snow cover decreased rapidly after the first few days. By the end of the month livestock ranged freely, tame grasses were greening and the soil was in excellent condition.

TEMPERATURE

The mean temperature for the state was 26.1°, or 3.5° above the normal, and 4.4° less than the mean for March, 1929. The highest mean reported was 31.6° at Hankinson, Richland County; the lowest was 17.5° at Langdon, Cavalier County. The highest temperature reported was 62° at Oakes, Dickey County on the 19th; the lowest was -17° at Park River, Walsh County on the 20th. The greatest monthly range of temperature was 68° at Garrison, McLean County, and New England, Hettinger County; the least was 50° at Grafton, Walsh County, and Mott, Hettinger County. The greatest daily range in temperature was 57° at Mayville, Traill County on the 20th.

PRECIPITATION

The average precipitation for the state was 0.09 inch, or 0.74 inch below the normal, and 0.69 inch less than the average for March, 1929. The greatest monthly amount reported was 0.80 inch at Power, Richland County; there was none at six stations in the northern and central parts of the state. The greatest amount recorded in any 24 consecutive hours was 0.48 inch at Verona, Lamoure County on the 1st. The average snowfall was 0.9 inch. The average number of days with 0.01 inch or more of precipitation was 1.

AURORAS

Auroras were observed at McLeod on the 2d; at Howard, Williston and Willow City on the 3d; at Fessenden on the 10th; at Foxholm, Grand Forks, Larimore and Sharon on the 11th; at McLeod on the 12th; at Arnegard on the 15th; at Arnegard, Foxholm, McClusky, Rugby and Velva on the 16th; at Bottineau, Eckman, Epping, Foxholm, Grand Forks, Howard, McClusky, Rugby and Willow City on the 17th; at Eckman, Foxholm, McClusky, McLeod and Sharon on the 18th; at Eckman, Ellendale, Foxholm, McClusky, Sharon and Willow City on the 20th; at Ellendale, McLeod and Pettibone on the 21st; at Foxholm on the 23d; at Bottineau on the 24th; at Devils Lake, Fessenden and Foxholm on the 26th; at Devils Lake and Williston on the 27th; at Bottineau, Foxholm, Howard, Napoleon, Sharon and Willow City on the 28th; at Bottineau, Carlson and Napoleon on the 29th; at Carlson on the 30th; and at Foxholm on the 31st.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Dogden Butte, near Butte; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard; McKinney, Tolley; Howard, Grenora; Metigoshe, Bottineau; Stowers, Lemmon, S. D.

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

Vol. XXXIX   Bismarck, N. D., April, 1930   No. 4

GENERAL SUMMARY

The mean temperature for the month was decidedly above the normal, there having been but four warmer Aprils in the climatological history of the state. This excess in temperature was about equally due to high day temperatures and high night temperatures. The precipitation was somewhat deficient, but generally ample for all crops, and at the close of the month farm work was well advanced. Early planted spring wheat made slow growth, and pastures were also somewhat backward.

TEMPERATURE

The mean temperature for the state was 47.3°, or 5.6° above the normal, and 5.8° higher than the mean for April, 1929. The highest mean reported was 51.3° at Marmarth, Slope County; the lowest was 41.4° at Hansboro, Towner County. The highest temperature reported was 86° at Carson, Grant County on the 9th; the lowest was 8° at Hansboro, Towner County on the 1st. The greatest monthly range of temperature was 72° at Berthold Agency, McLean County; the least was 50° at Melville, Foster County. The greatest daily range in temperature was 57° at Fort Yates, Sioux County on the 7th, and at Linton, Emmons County on the 8th.

PRECIPITATION

The average precipitation for the state was 1.25 inches, or 0.13 inch below the normal, and 0.06 inch less than the average for April, 1929. The greatest monthly amount reported was 3.67 inches at Carson, Grant County; the least was 0.10 inch at Pembina, Pembina County. The greatest amount recorded in any 24 consecutive hours was 2.00 inches at Berthold Agency, McLean County on the 14th. The average snowfall was 0.5 inch. The average number of days with 0.01 inch or more of precipitation was 6.

AURORAS

Auroras were observed at Crosby, Fessenden, Foxholm and Grand Forks on the 2d; at Crosby on the 3d; at Rugby on the 5th; at Crosby, Epping, Foxholm, Moorhead and Oakes on the 7th; at Rugby, Stanton and Towner on the 8th; at Carson and Foxholm on the 12th; at Rugby on the 14th; at Howard on the 16th; at Ellendale, Grand Forks and Willow City on the 18th; at Bottineau, Ellendale, Fessenden, Foxholm, Grand Forks, Howard, Larimore, Moorhead, Steele and Velva on the 19th; at Bottineau, Dogden Butte, McClusky and Towner on the 20th; at Ellendale, Foxholm, Rugby and Steele on the 21st; at Bottineau and Dogden Butte on the 22d; at Crosby and Dogden Butte on the 24th; at Powers Lake on the 27th and 28th; and at Ellendale on the 30th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Dogden Butte, near Butte; **Energy, Underwood; Grand Forks, University; Lamoine, Tuttle** Power, Leonard; Howard, Grenora; Metigoshe, Bottineau; Stowers, Lemmon, S. D.

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

Vol. XXXIX   Bismarck, N. D., May, 1930   No. 5

GENERAL SUMMARY

While the mean temperature for the month was slightly below the normal, the greatest deficiency occurred during the second decade, when freezing temperatures were general in all parts of the state. Some damage to crops was reported, but the greatest damage was to garden truck and fruit. The precipitation, which was somewhat above the normal, was quite evenly distributed geographically. Heavy rains and scattered showers were quite general from the 1st to the 14th, inclusive, with the exception of the 2d and 3d. Only scattered showers prevailed from the 15th to 31st, inclusive. Spring wheat, oats, speltz and barley stooled heavily and were in generally good condition at the close of the month, while early planted corn and flax were up to good stand and color, with rye either headed or heading. Considerable damage to crops from high winds was reported from many parts of the state.

TEMPERATURE

The mean temperature for the state was 50.8°, or 1.8° below the normal, and 1.7° higher than the mean for May, 1929. The highest mean reported was 56.8° at Wahpeton, Richland County; the lowest was 45.5° at Hansboro, Towner County. The highest temperature reported was 98° at Park River, Walsh County on the 21st; the lowest was 18° at Eckman, Bottineau County on the 16th and 29th. The greatest monthly range of temperature was 74° at Eckman, Bottineau County, and at Lisbon, Ransom County; the least was 56° at McClusky, Sheridan County, and Powers Lake, Burke County. The greatest daily range in temperature was 62° at Park River, Walsh County on the 21st.

PRECIPITATION

The average precipitation for the state was 2.62 inches, or 0.07 inch above the normal, and 0.37 inch less than the average for May, 1929. The greatest monthly amount reported was 5.99 inches at Larimore, Grand Forks County; the least was 0.96 inch at Beach, Golden Valley County. The greatest amount recorded in any 24 consecutive hours was 2.12 inches at McLeod, Ransom County on the 11th. The average snowfall was 0.7 inch. The average number of days with 0.01 inch or more of precipitation was 9.

AURORAS

Auroras were observed at Ellendale on the 1st; at Bottineau, Foxholm, Towner and Willow City on the 3d; at Foxholm and Hannah on the 4th; at Foxholm, Howard and Westhope on the 5th; at Bottineau and Ellendale on the 6th; at Bismarck and Bottineau on the 9th; at Bottineau on the 12th; at Bottineau, Howard and Marmarth on the 15th; at Forman, Foxholm, Fullerton, Mandan, Oaks, Steele, Trotters and Velva on the 16th; at Bismarck, Grand Forks, Hannah, Howard, McLeod, Towner and Willow City on the 17th; at Bottineau and McLeod on the 18th; at Foxholm and Oakes on the 19th; at Foxholm on the 20th; at Bismarck and Foxholm on the 29th; at Bismarck, Bottineau, Devils Lake, Ellendale, Fessenden, Forman, Foxholm, Hannah, McClusky, Mandan, Oakes, Sharon, Steele, Valley City, Velva, Willow City and Moorhead, Minn. on the 30th; and at Dogden Butte, Ellendale, Fessenden, Garrison, Grand Forks, Hannah, McClusky, McLeod and Rugby on the 31st.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Dogden Butte, near Butte; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle Power, Leonard; Howard, Grenora; Metigoshe, Bottineau; Stowers, Lemmon, S. D.

Daily Precipitation for May, 1930

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

VOL. XXXIX   BISMARCK, N. D., JUNE, 1930   No. 6

GENERAL SUMMARY

Temperature above the normal, accompanied by more than the usual wind movement prevailed in most sections of North Dakota during the fore part of June. The departure from the normal was mostly due to high night temperatures, as few maximum temperatures of 90° or above were reported. The precipitation was generally deficient, above normal departures being almost wholly confined to the central and southwest portions. As a rule crops at the close of the month were in good to excellent condition, although rain was needed in most sections of the state.

TEMPERATURE

The mean temperature for the state was 63.3°, or 0.5° above the normal, and 1.9° higher than the mean for June, 1929. The highest mean reported was 67.8° at Fort Yates, Sioux County; the lowest was 59.4° at Hansboro, Towner County. The highest temperature reported was 96° at Lisbon, Ransom County on the 21st; the lowest was 30° at Pembina, Pembina County on the 6th. The greatest monthly range of temperature was 64° at Lisbon, Ransom County; the least was 41° at Velva, McHenry County. The greatest daily range in temperature was 54° at Pembina, Pembina County on the 7th.

PRECIPITATION

The average precipitation for the state was 3.09 inches, or 0.41 inch below the normal, and 1.65 inches more than the average for June, 1929. The greatest monthly amount reported was 6.71 inches at Berthold Agency, McLean County; the least was 0.13 inch at Verona, Lamoure County. The greatest amount recorded in any 24 consecutive hours was 3.35 inches at Mohall, Renville County on the 18th. The average number of days with 0.01 inch or more of precipitation was 10.

AURORAS

Auroras were observed at Towner on the 1st; at Bottineau on the 2d; at Beach on the 3d; at Crosby on the 5th; at Fessenden on the 6th; at Grand Forks on the 13th; at Arnegard, Beach, Ellendale, Pettibone and Tagus on the 15th; at Beach, Ellendale, Richardson, Sharon and Willow City on the 16th; at Bottineau and Ellendale on the 17th; at Foxholm and Sharon on the 19th; at Velva on the 20th; at Bottineau on the 21st; at Towner on the 22d; at Bottineau on the 23d; at Willow City on the 25th; at Bottineau and Towner on the 26th; at Pettibone, Westhope and Willow City on the 28th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ᵃ, ᵇ, ᶜ, appearing in the table indicate number of days missing; for example, ᵇ represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Dogden Butte, near Butte; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle Power, Leonard; Howard, Grenora; Metigoshe, Bottineau; Stowers, Lemmon, S. D.

Daily Precipitation for June, 1930

VOL. XXXIX   BISMARCK, N. D., JULY, 1930   No. 7

GENERAL SUMMARY

The moisture content of the soil at the opening of the month was generally deficient, due to lack of precipitation and almost continuous high winds during June. This condition was greatly aggravated during July, when considerably less than one-half of the normal precipitation occurred and the temperature averaged nearly five degrees above the normal. There has been but one July (1916) with a higher mean temperature and but one July (1894) with less precipitation. Early small grains ripened too rapidly, and all crops deteriorated greatly in nearly all parts of the state. Rye harvest was general during the second decade and nearly completed and considerable threshed during the third decade. Harvesting and combining made rapid progress during the last decade, with yields being generally below normal. Pastures were drying, and rain was needed in all sections for late corn and flax.

TEMPERATURE

The mean temperature for the state was 72.3°, or 4.8° above the normal, and 1.7° higher than the mean for July, 1929. The highest mean reported was 79.4° at Fort Yates, Sioux County; the lowest was 63.4° at Hansboro, Towner County. The highest temperature reported was 107° at Napoleon, Logan County on the 11th; the lowest was 34° at Wishek, McIntosh County on the 14th. The greatest monthly range of temperature was 70° at Wishek, McIntosh County; the least was 47° at Pembina, Pembina County. The greatest daily range in temperature was 61° at Lamoine, Kidder County on the 15th.

PRECIPITATION

The average precipitation for the state was 1.04 inches, or 1.57 inches below the normal, and 0.23 inch lower than the average for July, 1929. The greatest monthly amount reported was 4.37 inches at Hankinson, Richland County; the least was 0.02 inch at Energy, McLean County. The greatest amount recorded in any 24 consecutive hours was 2.10 inches at Oakes, Dickey County on the 2d. The average number of days with 0.01 inch or more of precipitation was 5.

AURORAS

Auroras were observed at Foxholm on the 2d; at Arnegard and Bottineau on the 4th; at Velva on the 5th; at Hettinger, Oakes, Rugby and Sharon on the 10th; at Willow City on the 12th; at Bottineau on the 14th, 15th, 20th and 21st; at Bottineau, Carson and Stanton on the 24th; at Berthold Agency, Bottineau, Carson, Devils Lake, Rugby and Velva on the 25th; at Bismarck and Bowman on the 26th; at Howard on the 27th; at Bottineau and Westhope on the 28th; at Foxholm, McLeod and Towner on the 29th; and at Carson and Foxholm on the 30th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used i determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Dogden Butte, near Butte; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle Power, Leonard; Howard, Grenora; Metigoshe, Bottineau; Stowers, Lemmon, S. D.

CLIMATOLOGICAL DATA

Y OF THE
OF ILLINOIS

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

VOL. XXXIX BISMARCK, N. D., AUGUST, 1930 No. 8

GENERAL SUMMARY

August opened with unseasonably high temperature and very little precipitation occurred during the first decade. During this period rye harvesting was nearly completed and good headway was made in harvesting of spring wheat and other small grains. Much rye was threshed, and some wheat and barley were threshed, with yields generally below normal. Drought conditions were relieved somewhat during the second decade in some sections, delaying harvesting and threshing, but improved pastures and meadows. Scattered showers were prevalent during the last decade, further improving pastures and conditions for fall plowing and the seeding of winter rye. Light frosts were reported in the north portion, but little damage was done. Silo filling and corn shocking were well under way at the close of the month.

TEMPERATURE

The mean temperature for the state was 70.4°, or 5.0° above the normal, and 1.9° higher than the mean for August, 1929. The highest mean reported was 74.0° at Wahpeton, Richland County; the lowest was 61.2° at Hansboro, Towner County. The highest temperature reported was 104° at Sharon, Steele County on the 2d, and at Napoleon, Logan County on the 6th; the lowest was 32° at Hansboro, Towner County on the 10th, and at Portal, Burke County on the 31st. The greatest monthly range of temperature was 68° at Portal, Burke County; the least was 48° at Pembina, Pembina County. The greatest daily range in temperature was 54° at Max, McLean County on the 2d and 4th.

PRECIPITATION

The average precipitation for the state was 1.45 inches, or 0.83 inch below the normal, and 0.68 inch more than the average for August, 1929. The greatest monthly amount reported was 5.01 inches at Ellendale, Dickey County; the least was a trace at Pembina, Pembina County. The greatest amount recorded in any 24 consecutive hours was 3.02 inches at Ellendale, Dickey County on the 18-19th. The average number of days with 0.01 inch or more of precipitation was 6.

AURORAS

Auroras were observed at Foxholm, Howard, Rugby, Tagus and Willow City on the 5th; at Howard and Oakes on the 6th; at Bottineau on the 7th; at Bottineau and Willow City on the 8th; at Bottineau, Dogden Butte and Howard on the 9th; at Carson on the 20th; at Arnegard, Bottineau, Fessenden, Foxholm, Rugby and Trotters on the 21st; at Crosby and Foxholm on the 22d; at Bottineau and Foxholm on the 23d; at Bottineau, Rugby and Willow City on the 24th; at Arnegard on the 26th; at Foxholm an the 28th; at Arnegard, Bottineau and Tagus on the 29th; at Devils Lake, Foxholm, Rugby, Sharon and Tagus on the 30th; and at Bottineau, Crosby, Howard and Larimore on the 31st.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Dogden Butte, near Butte; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle Power, Leonard; Howard, Grenora; Metigoshe, Bottineau; Stowers, Lemmon, S. D.

Daily Precipitation for August, 1930

ORRIS W. ROBERTS, Meteorologist

Vol. XXXIX Bismarck, N. D., September, 1930 No. 9

GENERAL SUMMARY

Generally fair weather prevailed during the first five days, and during that period combining of small grains and shock threshing made excellent headway. From the 6th to the 14th, inclusive, light to heavy showers were general, delaying threshing but greatly improving plowing and fall seeding conditions. Much corn was cut for fodder, and silo filling was nearly completed at the end of the second decade. During the last decade flax harvesting and threshing of all kinds were practically completed. Generous rains greatly improved pastures and livestock was in good condition at the close of the month.

TEMPERATURE

The mean temperature for the state was 56.2°, or 0.2° below the normal, and 3.5° higher than the mean for September, 1929. The highest mean reported was 62.1° at Wahpeton, Richland County; the lowest was 47.6° at Hansboro, Towner County. The highest temperature reported was 98° at New Salem, Morton County on the 4th; the lowest was 10° at Carrington, Foster County on the 28th. The greatest monthly range of temperature was 80° at Willow City, Bottineau County; the least was 56° at Powers Lake, Burke County. The greatest daily range in temperature was 58° at Fort Yates, Sioux County on the 20th.

PRECIPITATION

The average precipitation for the state was 1.02 inches, or 0.62 inch below the normal, and 0.63 inch less than the average for September, 1929. The greatest monthly amount reported was 3.18 inches at Park River, Walsh County; there was none at Verona, Lamoure County. The greatest amount recorded in any 24 consecutive hours was 2.70 inches at Hankinson, Richland County on the 11th. The average number of days with 0.01 inch or more of precipitation was 4.

AURORAS

Auroras were observed at Bottineau, Crosby, Foxholm, Larimore and Tagus on the 1st; at Arnegard, Bottineau, Dogden Butte, Pettibone, Tagus and Willow City on the 2d; at Bottineau and Foxholm on the 3d; at Fessenden, Napoleon and Oakes on the 4th; at Arnegard and Tagus on the 16th; at Bottineau and Foxholm on the 18th; at Tagus on the 19th; at Foxholm on the 20th and 21st; at Rugby on the 23d; at Foxholm and Velva on the 25th; at Bottineau, Crosby and Napoleon on the 26th; at Crosby, Foxholm, Napoleon, Oakes, Stanton, Tagus and Velva on the 27th; at Bottineau, Crosby, Epping, Fessenden, Foxholm, Grand Forks, Larimore, Rugby, Stanton, Tagus and Willow City on the 28th; at Arnegard, Bottineau, Bowman, Crosby, Epping, Foxholm, Grand Forks, Hannah, Hettinger, Larimore, Marmarth, Oakes, Petersburg, Rugby, Sharon, Stowers, Tagus and Willow City on the 29th; and at Dogden Butte, Napoleon and Velva on the 30th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, a, b, c, appearing in the table indicate number of days missing; for example, b represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Dogden Butte, near Butte; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard; Howard, Grenora; Metigoshe, Bottineau; Stowers, Lemmon, S. D.

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

Vol. XXXIX BISMARCK, N. D., OCTOBER, 1930 No. 10

GENERAL SUMMARY

The weather during October, taken as a whole, was favorable. Precipitation was general during all of the first decade and also during most of the second, comprising the longest period of continuous precipitation in the climatological history of the state. As a result, practically all stations showed totals in excess of the normal. These rains greatly improved conditions for fall plowing and for seeding winter rye, and those activities continued in most sections until the close of the month. The temperature, however, averaged below the normal

TEMPERATURE

The mean temperature for the state was 40.8°, or 3.0° below the normal, and 6.0° lower than the mean for October, 1929. The highest mean reported was 46.2° at Wahpeton, Richland County; the lowest was 33.6° at Hansboro, Towner County. The highest temperature reported was 86° at Wahpeton, Richland County on the 11th; the lowest was zero at Beach, Golden Valley County on the 17th. The greatest monthly range of temperature was 87° at Wahpeton, Richland County; the least was 19° at Pembina, Pembina County. The greatest daily range in temperature was 50° at Portal, Burke County on the 22d, and at Westhope, Bottineau County on the 2d.

PRECIPITATION

The average precipitation for the state was 1.81 inches, or 0.81 inch above the normal, and 0.04 inch less than the average for October, 1929. The greatest monthly amount reported was 3.94 inches at Powers Lake, Burke County; the least was 0.40 inch at Power, Richland County. The greatest amount recorded in any 24 consecutive hours was 1.53 inches at Devils Lake, Ramsey County on the 11-12th. The average number of days with 0.01 inch or more of precipitation was 7. The average snowfall was 0.3 inch.

AURORAS

Auroras were observed at Willow City on the 2d; at Rugby on the 9th; at Foxholm on the 13th, 14th and 15th; at Williston on the 14th; at Drake on 17th; at Foxholm and Hettinger on the 18th; at Drake and Foxholm on the 19th; at Ellendale, Foxholm and Williston on the 25th; at Ellendale, Hettinger, Sharon and Williston on the 26th; at Bottineau on the 28th; at Foxholm, Velva and Westhope on the 29th; at Bottineau on the 30th; and at Williston on the 30th and 31st.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ‡‡Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Dogden Butte, near Butte; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard; Howard, Grenora; Metigoshe, Bottineau; Stowers, Lemmon, S. D.

Daily Precipitation for October, 1930

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

Vol. XXXIX Bismarck, N. D., November, 1930 No. 11

GENERAL SUMMARY

Mild and pleasant weather prevailed generally during the first decade and excellent progress was made in corn picking and other late farm work. The second and third decades were much colder and light to heavy snows occurred especially in the east and south-central portions. A severe glaze and sleet storm caused much property loss and great inconvenience to telephone, telegraph, electric light and railway companies. Communication between Bismarck and Fargo was only possible by radio between stations KFYR and WDAY. Due to heavy snow, most main highways in the area mentioned were blocked at times, and many crossroads were impassable at the close of the month.

TEMPERATURE

The mean temperature for the state was 29.4°, or 2.8° above the normal, and 4.6° higher than the mean for November, 1929. The highest mean reported was 33.2° at Amenia, Cass County; the lowest was 23.6° at Langdon, Cavalier County. The highest temperature reported was 72° at Berthold Agency, McLean County on the 3d, and at Dickinson, Stark County on the 9th; the lowest was −21° at Drake, McHenry County on the 30th. The greatest monthly range of temperature was 86° at Drake, McHenry County; the least was 60° at New England, Hettinger County. The greatest daily range in temperature was 53° at Berthold Agency, McLean County on the 9th.

PRECIPITATION

The average precipitation for the state was 0.87 inch, or 0.29 inch above the normal, and 0.34 inch more than the average for November, 1929. The greatest monthly amount reported was 3.09 inches at Grand Forks, Grand Forks County; he least was a trace at three stations in the north-central part of the state. The greatest amount recorded in any 24 consecutive hours was 1.50 inches at Hankinson, Richland County on he 19th. The average number of days with 0.01 inch or more of precipitation was 5. The average snowfall was 6.2 inches.

AURORAS

Auroras were observed at Bottineau and Williston on the 1st; t Williston on the 3d; at Bottineau, Dogden Butte, Ellendale, Villiston and Moorhead on the 4th; at Arnegard on the 14th; t Crosby on the 13th, 14th and 15th; at Howard on the 22d; t Rugby and Willow City on the 23d; at Bottineau on the 24th; t Bottineau, Foxholm, Rugby and Stanton on the 25th; at loorhead on the 26th; at Forman on the 27th; and at Williston on the 28th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Dogden Butte, near Butte; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard; Howard, Grenora; Metigoshe, Bottineau; Stowers, Lemmon, S. D.

Daily Precipitation for November, 1930

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

Vol. XXXIX   Bismarck, N. D., December, 1930   No. 12

GENERAL SUMMARY

The weather during the month was mild and pleasant, no other December in the climatological history of the state having lower average precipitation combined with a higher mean temperature. This condition was particularly true of the northwestern portion of the state where no sub-zero temperatures were recorded. As a result of these favorable conditions livestock ranged freely upon pastures and harvested fields, saving much eed. Highways were generally excellent, except in the southentral portion, where a heavy snow covering from preceding nonths obtains.

TEMPERATURE

The mean temperature for the state was 19.9°, or 6.9° above he normal, and 7.4° higher than the mean for December, 929. The highest mean reported was 26.4° at Mott, Hettinger County; the lowest was 12.6° at Langdon, Cavalier County. The highest temperature reported was 53° at Hettinger, Adams County on the 8th; the lowest was −30° at Villow City, Bottineau County on the 1st. The greatest nonthly range of temperature was 69° at Willow City, Bottieau County; the least was 34° at Howard, Williams County. he greatest daily range in temperature was 50° at Cando, owner County on the 1st.

PRECIPITATION

The average precipitation for the state was 0.19 inch, or .35 inch below the normal, and 0.62 inch lower than the verage for December, 1929. The greatest monthly amount eported was 0.90 inch at Pembina, Pembina County; there as none at Edgeley, Lamoure County, Mayville, Traill ounty, Tioga, Williams County, Verona, LaMoure County, nd Zap, Mercer County. The greatest amount recorded in ny 24 consecutive hours was 0.50 inch at Willow City, Bottieau County on the 4th. The average number of days with .01 inch or more of precipitation was 3. The average snow- ll was 2.0 inches.

AURORAS

Auroras were obseved at Devils Lake, Ellendale, Moorhead Iinn.), and Willow City on the 3d; at Foxholm on the 10th; Napoleon and Tagus on the 20th; at Eckman on the 23d; at oxholm on the 24th and 25th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Dogden Butte, near Butte; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard; Howard, Grenora; Metigoshe, Bottineau; Stowers, Lemmon, S. D.

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

28
JUL 1 1931
UNIVERSITY OF ILLINOIS

ORRIS W. ROBERTS, Meteorologist

VOL. XXXX   BISMARCK, N. D., JANUARY, 1931   No. 1

GENERAL SUMMARY

The weather during the month in North Dakota from a personal comfort standpoint, was the most excellent of record. The mean temperature (21.4°) was the highest of record in the climatological history of the state, the precipitation average (0.15 inch) was the third lowest of record, there were no damaging winds, and conditions were ideal for outside work and for livestock. There were but two stormy periods, both of short duration, and at the close of the month highways in all parts of the state were open, the snow covering being mostly confined to the northwest section.

TEMPERATURE

The mean temperature for the state was 21.4°, or 15.2° above the normal, and 23.3° higher than the mean for January, 1930. The highest mean reported was 29.8° at Amidon, Slope County; the lowest was 10.2° at Langdon, Cavalier County. The highest temperature reported was 68° at Carson, Grant County on the 29th; the lowest was -31° at Towner, McHenry County on the 13th and 14th. The greatest monthly range of temperature was 84° at Carson, Grant County; the least was 48° at Pembina, Pembina County. The greatest daily range in temperature was 59° at Amenia, Cass County on the 13th.

PRECIPITATION

The average precipitation for the state was 0.15 inch, or 0.32 inch below the normal, and 0.14 inch lower than the average for January, 1930. The greatest monthly amount reported was 0.91 inch at Steele, Kidder County; there was none at four stations in the northern part of the state. The greatest amount recorded in any 24 consecutive hours was 0.80 inch at Steele, Kidder County on the 11th. The average number of days with 0.01 inch or more of precipitation was 2. The average snowfall was 1.4 inches.

AURORAS

Auroras were observed at Hannah on the 7th; at Foxholm and Hannah on the 8th; at Eckman, Foxholm and Tagus on the 9th; at Foxholm and Williston on the 16th; at Bottineau, Foxholm, Rugby and Velva on the 25th; at Towner on the 26th; and at Williston on the 29th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ‡‡Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Dogden Butte, near Butte; Energy, Underwood; Grand Forks, University; Power, Leonard; Howard, Grenora; Stowers, Lemmon, S. D.

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

VOL. XXXX BISMARCK, N. D., FEBRUARY, 1931 No. 2

GENERAL SUMMARY

Unusually favorable weather prevailed throughout North Dakota during the month. The mean temperature was 28.0°, 17.8° above the normal, and 5.7° higher than the mean for any preceding February in the climatological history of the state. The snowfall was greatly deficient, the average being but slightly more than one-half of the normal. As a result of these conditions, outdoor work continued uninterruptedly and livestock ranged freely on pastures and harvested fields, saving much feed.

TEMPERATURE

The mean temperature for the state was 28.0°, or 17.8° above the normal, and 6.3° higher than the mean for February, 1930. The highest mean reported was 32.8° at Marmarth, Slope County; the lowest was 19.8° at Langdon, Cavalier County. The highest temperature reported was 62° at Berthold Agency, McLean County on the 19th; the lowest was -31° at Towner, McHenry County on the 9th. The greatest monthly range of temperature was 87° at Towner, McHenry County; the least was 48° at Crosby, Divide County, and Howard, Williams County. The greatest daily range in temperature was 54° at Langdon, Cavalier County on the 14th.

PRECIPITATION

The average precipitation for the state was 0.28 inch, or 0.21 inch below the normal, and 0.90 inch lower than the average for February, 1930. The greatest monthly amount reported was 1.62 inches at Fullerton, Dickey County; there was none at five stations in the northern part of the state. The greatest amount recorded in any 24 consecutive hours was 0.70 inch at Langdon, Cavalier County on the 25th. The average number of days with 0.01 inch or more of precipitation was 2. The average snowfall was 2.9 inches.

AURORAS

Auroras were observed at Rugby on the 4th; at Foxholm and Rugby on the 7th; at Rugby on the 9th; at Foxholm and Howard on the 12th; at Arnegard, Foxholm, Rugby, Sharon, Towner and Williston on the 13th; at Arnegard, Bottineau, Bowman and Dogden Butte on the 14th; at Bottineau on the 15th; at Bottineau, Devils Lake and Grand Forks on the 23d; at Ellendale and Moorhead on the 24th; and at Bottineau, Ellendale, Foxholm, Rugby, Tagus, Towner and Moorhead on the 25th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

††Post-office addresses of these stations are: Berthold Agency, Elbowoods; Dogden Butte, near Butte; Energy, Underwood; Grand Forks, University; Power, Leonard; Howard, Grenora; Stowers, Lemmon, S. D.

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

28

ORRIS W. ROBERTS, Meteorologist

Vol. XXXX Bismarck, N. D., March, 1931 No. 3

GENERAL SUMMARY

Favorable weather prevailed throughout North Dakota during most of the month. March was the first month since November, 1930 with precipitation above normal. Light snow fell on many days throughout the month and beneficial showers occurred at most stations during the third decade. Temperatures were above normal all month in most sections, except during the cold spell from the 25th to the 27th. Most stations reported their highest temperatures on about the 22d, and the lowest on the 26th. March was the fourth consecutive month with the temperature above normal and livestock ranged freely most of the winter, although feed was scarce. By the end of the month preparations were being made for farm work and the top soil was in good condition but a deficiency of subsoil moisture prevailed. F.J.B.

TEMPERATURE

The mean temperature for the state was 25.7°, or 1.6° above the normal, and 0.4° lower than the mean for March, 1930. The highest mean reported was 32.0° at Amidon, Slope County; the lowest was 18.2° at Pembina, Pembina County. The highest temperature reported was 63° at Portal, Burke County on the 31st; the lowest was -24° at Towner, McHenry County on the 26th. The greatest monthly range of temperature was 77° at Portal, Burke County; the least was 45° at Hillsboro, Traill County. The greatest daily range in temperature was 55° at Towner, McHenry County on the 25th.

PRECIPITATION

The average precipitation for the state was 0.94 inch, or 0.24 inch above the normal, and 0.85 inch more than the average for March, 1930. The greatest monthly amount reported was 2.33 inches at Bowman, Bowman County; the least was 0.07 inch at Westhope, Bottineau County. The greatest amount recorded in any 24 consecutive hours was 1.25 inches at Fullerton, Dickey County on the 23d. The average number of days with 0.01 inch or more of precipitation was 5. The average snowfall was 4.8 inches.

AURORAS

Auroras were observed at Bottineau on the 7th; at McLeod on the 9th; at Williston on the 13th; at Foxholm, Howard, Tagus and Willow City on the 14th; at Bottineau, Eckman and Foxholm on the 23d; at Bottineau, Eckman and Howard on the 24th; and at Carson on the 25th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing: for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Dogden Butte, near Butte; Energy, Underwood; Grand Forks, University; Power, Leonard; Howard, Grenora; Stowers, Lemmon, S. D.

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

VOL. XXXX BISMARCK, N. D., APRIL, 1931 No. 4

GENERAL SUMMARY

The month of April was warm and unusually dry. The precipitation averaged 0.43 inch, making it the second driest April since statewide records began in 1892. April, 1926 with 0.28 inch was the driest. Only two precipitation periods, from the 1st to the 3d and from the 14th to the 21st, occurred during the month. A few stations in the southeastern part of the state reported amounts slightly above normal, but in many other sections particularly in the Red River valley and in the Missouri valley the precipitation averaged more than an inch below normal. The temperature averaged above the normal, but cold periods occurred from the 2d to the 4th, and from the 19th to the 27th. April was a good month for outdoor activities and farm work made favorable progress, but the ground was too dry in most sections, particularly in the western half of the state. High winds caused dust storms on many days and some reseeding was necessary on sandy soil.

TEMPERATURE

The mean temperature for the state was 44.1°, or 2.5° above the normal, and 3.2° lower than the mean for April, 1930. The highest mean reported was 49.8° at Hankinson, Richland County; the lowest was 37.7° at Hansboro, Towner County. The highest temperature reported was 87° at Max, McLean County on the 18th; the lowest was 3° at Hansboro, Towner County on the 3d. The greatest monthly range of temperature was 79° at Eckman, Bottineau County; the least was 61° at Pembina, Pembina County. The greatest daily range in temperature was 64° at Wishek, McIntosh County on the 6th.

PRECIPITATION

The average precipitation for the state was 0.43 inch, or 0.96 inch below the normal, and 0.82 inch less than the average for April, 1930. The greatest monthly amount reported was 2.38 inches at Jamestown, Stutsman County; Minot, Ward County reported no precipitation. The greatest amount recorded in any 24 consecutive hours was 1.30 inches at Forman, Sargent County on the 2d. The average number of days with 0.01 inch or more of precipitation was 2. The average snowfall was 0.7 inch.

AURORAS

Auroras were observed at Bottineau on the 4th; at Bottineau, Devils Lake, Foxholm and Napoleon on the 17th; at Dogden Butte and New England on the 18th; at Napoleon on the 20th; and at Foxholm on the 23d.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Dogden Butte, near Butte; Energy, Underwood; Grand Forks, University; Power, Leonard; Howard, Grenora; Stowers, Lemmon, S. D.

NORTH DAKOTA SECTION

28

ORRIS W. ROBERTS, Meteorologist

Vol. XXXX   Bismarck, N. D., May, 1931   No. 5

GENERAL SUMMARY

The weather during the month was favorable for outdoor work, but was too dry in the western and central portions and particularly in the northwestern portion where droughty conditions prevailed Nearly normal precipitation occurred in the Red River valley, but some of the northwestern stations reported the least moisture of record for May. All months since November, 1930, except March, had precipitation below the normal. The temperature averaged slightly above normal for the state, but was slightly below normal in the eastern third and above at most places in the western two-thirds. Killing frosts from the 20th to the 22d damaged flax and gardens and retarded the growth of small grains and pastures. By the close of the month early crops and pastures were making good growth in the eastern and southern parts of the state, but it was too dry for crop growth in most northwestern counties.

THE LIBRARY OF THE UNIVERSITY

TEMPERATURE

The mean temperature for the state was 53.1°, or 0.3° above the normal, and 2.3° higher than the mean for May, 1930. The highest mean reported was 55.9° at Hankinson, Richland County; the lowest was 45.0° at Hansboro, Towner County. The highest temperature reported was 100° at Amenia, Cass County on the 15th and 26th; the lowest was 10° at Washburn, McLean County on the 5th. The greatest monthly range of temperature was 87° at Washburn, McLean County; the least was 64° at Pettibone, Kidder County. The greatest daily range in temperature was 61° at Linton, McIntosh County on the 23d.

PRECIPITATION

The average precipitation for the state was 1.41 inches, or 0.99 inch below the normal, and 1.21 inches less than the average for May, 1930. The greatest monthly amount reported was 3.40 inches at Hillsboro, Traili County; the least was a trace at Mohall, Renville County. The greatest amount recorded n any 24 consecutive hours was 1.63 inches at Edgeley, LaMoure County on the 27th. The average number of days with 0.01 inch or more of precipitation was 2. The average snowfall was 0.3 inch.

AURORAS

Auroras were observed at Bottineau, Eckman and Foxholm on the 5th; at Bottineau, Devils Lake, Eckman, Ellendale, Foxholm, Oakes, Sharon, Stanton, Tagus, Towner, and Willow City on the 6th; at Crosby, Dogden Butte, Ellendale, and Towner on the 7th; at Oakes on the 10th; at Bottineau and Willow City on the 11th; at Foxholm, Hettinger and McLeod on the 12th; at Bottineau, Foxholm and Sanish on the 13th; t Bottineau, Hettinger, Linton, Sanish, Sharon, and Tagus on the 14th; at Dogden Butte on the 15th; and at Bottineau n the 18th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ‡‡Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: **Berthold Agency**, Elbowoods; Dogden Butte, near Butte; **Energy**, Underwood; **Grand Forks**, University; **Power**, Leonard; Howard, Grenora; Stowers, Lemmon, S. D.

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

28

ORRIS W. ROBERTS, Meteorologist

Vol. XXXX   Bismarck, N. D., June, 1931   No. 6

GENERAL SUMMARY

With the opening of June there was a general deficiency in soil moisture in all parts of the state, particularly in the west and central portions, as all months since November 1930, with the exception of March, produced less than the normal precipitation. The rainfall during June was unevenly distributed geographically, with the result that crops deteriorated rapidly in some of the western counties, and crops for the state as a whole are below normal. Spring wheat generally headed short, as did rye, oats and barley, much of these three crops being cut for hay, as the hay crop is short in many sections.

TEMPERATURE

The mean temperature for the state was 68.1°, or 5.9° above the normal, and 5.1° higher than the mean for June, 1930. The highest mean reported was 71.7° at Hankinson, Richland County; the lowest was 59.2° at Hansboro, Towner County. The highest temperature reported was 110° at Arnegard, McKenzie County on the 16th, and at Berthold Agency, McLean County on the 17th; the lowest was 27° at Hansboro, Towner County on the 7th. The greatest monthly range of temperature was 79° at Eckman, Bottineau County; the least was 60° at Mohall, Renville County, and at Washburn, McLean County. The greatest daily range in temperature was 58° at Bottineau, Bottineau County on the 18th.

PRECIPITATION

The average precipitation for the state was 2.35 inches, or .10 inches below the normal, and 0.74 inch less than the average for June, 1930. The greatest monthly amount reported was 9.27 inches at McLeod, Ransom County; the least was 0.11 inch at Powers Lake, Burke County. The greatest amount recorded in any 24 consecutive hours was 6.00 inches at McLeod, Ransom County on the 10th. The average number of days with 0.01 inch or more of precipitation was 8.

AURORAS

Auroras were observed Bottineau, Bowman, Foxholm, and Velva on the 1st.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ‡‡Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Dogden Butte, near Butte; Energy, Underwood; Grand Forks, University; Power, Leonard; Howard, Grenora; Stowers, Lemmon, S. D.

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

VOL. XXXX BISMARCK, N. D., JULY, 1931 No. 7

GENERAL SUMMARY

The droughty conditions that prevailed generally over North Dakota up to the close of June were more or less relieved during the fore part of July, though not to a sufficient extent to anything like a normal condition. Light to heavy showers were quite general from the 3d to the 8th, inclusive, and also on the 11th, 18th and the last few days of the month. While the mean temperature was only 2.2° above the normal, one of the most outstanding periods of extreme heat in the history of the state prevailed from the 13th to the 27th, inclusive. No severe winds were reported, and less than the usual number of hailstorms.

TEMPERATURE

The mean temperature for the state was 70.6°, or 2.2° above the normal, and 1.7° lower than the mean for July, 1930. The highest mean reported was 75.6° at Hankinson, Richland County; the lowest was 62.4° at Hansboro, Towner County. The highest temperature reported was 111° at Fort Yates, Sioux County on the 26th, and at Napoleon, Logan County and Westhope, Bottineau County on the 25th; the lowest was 37° at Linton, Emmons County on the 5th. The greatest monthly range of temperature was 73° at Linton, Emmons County; the least was 55° at Moorhead, Clay County, Minn. The greatest daily range in temperature was 59° at Sanish, Mountrail County on the 28th.

PRECIPITATION

The average precipitation for the state was 3.03 inches, or 0.61 inch above the normal, and 1.99 inches less than the average for July, 1930. The greatest monthly amount reported was 5.36 inches at Petersburg, Nelson County; the least was 0.18 inch at Power, Richland County. The greatest amount recorded in any 24 consecutive hours was 2.55 inches at Grafton, Walsh County on the 1st. The average number of days with 0.01 inch or more of precipitation was 8.

AURORAS

Auroras were observed at Bowman on the 9th; at Eckman and Foxholm on the 16th; at Dogden Butte and Howard on 17th; at Eckman and Willow City on the 20th; at Rugby on the 22d; at Bottineau, Foxholm and Howard on the 23d; at Bottineau, Devils Lake and Velva on the 24th; at Bismarck on the 25th; and at Towner on the 29th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, a, b, c, appearing in the table indicate number of days missing; for example, b represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Dogden Butte, near Butte; Energy, Underwood; Grand Forks, University; Power, Leonard; Howard, Grenora; Stowers, Lemmon, S. D.

Daily Precipitation for July, 1931

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

VOL. XXXX   BISMARCK, N. D., AUGUST, 1931   No. 8

GENERAL SUMMARY

Although the mean temperature and average precipitation for the state were nearly normal, occasional periods of high temperature occurred and practically all precipitation was confined to the first decade and the 27-28th. Harvesting was completed during the month and much threshing done. Much small grain was cut for feed as the yields would not warrant harvesting and threshing costs. Some fall plowing and seeding of winter rye were accomplished, but the ground was mostly too dry at the close for good results. Pastures were in need of rain in practically all sections.

TEMPERATURE

The mean temperature for the state was 67.0°, or 0.8° above the normal, and 3.4° lower than the mean for August, 1930. The highest mean reported was 70.4° at Wahpeton, Richland County; the lowest was 64.4° at Bottineau, Bottineau County, and Wishek, McIntosh County. The highest temperature reported was 105° at McLeod, Ransom County on the 4th; the lowest was 30° at Pembina, Pembina County on the 30th and 31st. The greatest monthly range of temperature was 74° at McLeod, Ransom County; the least was 50° at Dogden Butte, McLean County. The greatest daily range in temperature was 53° at Fullerton, Dickey County on the 4th.

PRECIPITATION

The average precipitation for the state was 2.09 inches, or 0.05 inch above the normal, and 0.64 inch more than the average for August, 1930. The greatest monthly amount reported was 4.95 inches at Cando, Towner County; the least was 0.36 inch at Alpha, Golden Valley County. The greatest amount recorded in any 24 consecutive hours was 3.11 inches at Cando, Towner County on the 27th. The average number of days with 0.01 inch or more of precipitation was 6.

AURORAS

Auroras were observed at Devils Lake on the 1st; at Devils Lake, Eckman, Grafton, Howard, Rugby, Tagus, and Willow City on the 8th; at Napoleon on the 9th; at Bottineau, Carson, Devils Lake, Foxholm, Howard, Oakes, Sanish, Tagus, and Willow City on the 10th; at Foxholm and Parshall on the 11th; at Eckman on the 14th; at Devils Lake, Foxholm, Howard, and Rugby on the 15th; at Foxholm on the 16th; at Carson, Devils Lake and Rugby on the 18th; at Howard on the 21st; at Devils Lake, Foxholm, Sanish, and Sharon on the 24th; and at Howard on the 31st.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Dogden Butte, near Butte; **Energy, Underwood; Grand Forks, University; Power, Leonard;** Howard, Grenora; Stowers, Lemmon, S. D.

Daily Precipitation for August, 1931

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

VOL. XXXX BISMARCK, N. D., SEPTEMBER, 1931 No. 9

GENERAL SUMMARY

Unusually high temperature and deficient precipitation prevailed over most of the state during the first decade. The second decade, though somewhat cooler, continued dry. During these two decades threshing and late flax harvesting made excellent progress, though the ground was mostly too dry for fall plowing and seeding of winter rye, and pastures deteriorated considerably. The last decade was, however, both cooler and wet, improving conditions for fall plowing and potato digging. Early planted winter rye germinated quite favorably. Corn shocking and silo filling were mostly completed at the close of the month.

TEMPERATURE

The mean temperature for the state was 61.4°, or 5.0° above the normal, and 5.2° higher than the mean for September, 1930. The highest mean reported was 68.4° at Wahpeton, Richland County; the lowest was 56.4° at Bottineau, Bottineau County. The highest temperature reported was 107° at three stations in the central part of the state on the 6th, 7th and 9th; the lowest was 27° at three stations on the 17th and 24th. The greatest monthly range of temperature was 78° at Jamestown, Stutsman County, and Linton, Emmons County; the least was 61° at Powers Lake, Burke County. The greatest daily range in temperature was 59° at Pembina, Pembina County on the 7th.

PRECIPITATION

The average precipitation for the state was 2.14 inches, or 0.49 inch above the normal, and 1.12 inches more than the average for September, 1930. The greatest monthly amount reported was 4.63 inches at Park River, Walsh County; the least was 0.35 inch at Power, Richland County. The greatest amount recorded in any 24 consecutive hours was 1.75 inches at Garrison, McLean County on the 20th. The average number of days with 0.01 inch or more of precipitation was 6. A trace of snow fell at Howard, Williams County.

AURORAS

Auroras were observed at Trotters on the 2d; at Arnegard, Bismarck, Bottineau, Carson, Cooperstown, Devils Lake, Ellendale, Foxholm, Howard, McClusky, Napoleon, Oakes, Parshall, Rugby, Sharon, Tagus, Trotters, Willow City and Moorhead on the 3d; at Bottineau, Ellendale, McLeod, Napoleon, Oakes, Parshall, Rugby, Towner and Willow City on the 4th; at Crosby, Dogden Butte, Foxholm, McLeod, Rugby and Stowers on the 5th; at Arnegard, Dogden Butte, Foxholm, McLeod and Rugby on the 6th; at Devils Lake, Foxholm, Oakes and Rugby on the 7th; at Foxholm, Rugby, Tagus and Willow City on the 8th; at Eckman, Foxholm and Rugby on the 9th; at Crosby on the 10th; at Bottineau on the 11th; at Trotters on the 12th; at Arnegard, Bismarck, Bottineau, Devils Lake, Eckman, Foxholm, Grafton, Howard, Rugby, Sharon, Trotters and Willow City on the 14th; at Carson, Fessenden, Foxholm, McLeod, Rugby and Towner on the 15th; at Bismarck, Bottineau, Car-on, Ellendale, Fessenden, Foxholm, Hettinger, Rugby, San-sh, Sharon, Tagus, Trotters, Velva and Willow City on the 6th; at Ellendale, Grand Forks and McLeod on the 17th; at Trotters on the 20th; at Foxholm, Howard and Rugby on the 3d; at Towner on the 25th and 26th; at Velva on the 28th; nd at Eckman on the 30th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ᵃ, ᵇ, ᶜ, appearing in the table indicate number of days missing; for example, ᵇ represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

††Post-office addresses of these stations are: Berthold Agency, Elbowoods; Dogden Butte, near Butte; Energy, Underwood; Grand Forks, University; Power, Leonard; Howard, Grenora; Stowers, Lemmon, S. D.

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

28

ORRIS W. ROBERTS, Meteorologist

VOL. XXXX BISMARCK, N. D., OCTOBER, 1931 No 10

GENERAL SUMMARY

Mild and pleasant weather prevailed in all sections of the state throughout the greater portion of the month. The mean temperature for October was exceeded on but four occasions in the climatological history of North Dakota. During the first two decades only light scattered precipitation occurred, allowing fall work on farms, consisting mostly of fall plowing, seeding winter rye, potato digging and corn husking, to progress rapidly, and at the close of the month these activities were nearing completion, though the ground in some sections was too dry for best results for plowing. During the last decade quite generous showers occurred, bringing the average precipitation for the month above the normal.

TEMPERATURE

The mean temperature for the state was 47.7°, or 4.2° above he normal, and 6.9° higher than the mean for October, 1930. The highest mean reported was 52.8° at Wahpeton, Richland County; the lowest was 44.2° at Langdon, Cavalier County. The highest temperature reported was 90° at Wahpeton, Richand County on the 2d; the lowest was 10° at Washburn, McLean County on the 29th. The greatest monthly range of emperature was 73° at Washburn, McLean County; the least vas 40° at Powers Lake, Burke County. The greatest daily ange in temperature was 54° at Amenia, Cass County on the 9th.

PRECIPITATION

The average precipitation for the state was 1.39 inches, or .35 inch above the normal, and 0.42 inch less than the verage for October, 1930. The greatest monthly amount eported was 3.94 inches at Sharon, Steele County; the least vas a trace at Howard, Williams County. The greatest amount ecorded in any 24 consecutive hours was 1.61 inches at Lisbon, Ransom County on the 22d. The average number of days with .01 inch or more of precipitation was 6. The average snowall was 0.2 inch.

AURORAS

Auroras were observed at Carson, Eckman, Foxholm, Grand orks and Rugby on the 1st; at Eckman and Foxholm on the d; at Pembina on the 3d; at Arnegard, Carson, Devils Lake, llendale, Hettinger, Oakes, Stowers, Trotters, Willow City nd Moorhead on the 4th; at Bottineau, Bowman, Ellendale, oxholm and McLeod on the 5th; at Arnegard and Oakes on e 7th; at Carson, Eckman and Foxholm on the 8th; at Ellenale and Foxholm on the 9th; at Foxholm on the 11th; at rosby and Foxholm on the 13th; at Arnegard, Crosby and owner on the 14th; at Eckman, Foxholm, Pembina and Tagus the 15th; at Devils Lake, Ellendale, Foxholm, Hettinger nd Velva on the 16th; at Devils Lake, Ellendale, Foxholm, anish, Tagus, Velva, Williston and Willow City on the 17th; Devils Lake, Dogden Butte, Ellendale, Foxholm and Pemna on the 18th; at Dogden Butte and Sanish on the 19th; Carson and Oakes on the 23d; and at Towner on the 24th

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Dogden Butte, near Butte; Energy, Underwood; Grand Forks, University; Power, Leonard; Howard, Grenora; Stowers, Thunder Hawk, S. D.

CLIMATOLOGICAL DATA

OF THE
UNIVERSITY OF ILLINOIS

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

Vol. XXXX   Bismarck, N. D., November, 1931   No. 11

GENERAL SUMMARY

Mild temperatures prevailed in all sections during the first two decades and during this period only light scattered precipitation occurred. The last decade was much colder with light to heavy snow over most sections. During the first mentioned period, highways were in excellent condition and livestock ranged freely on ranges, pastures and harvested fields. Corn picking and other late farm work made excellent progress. During the last decade, however, yard feeding of livestock was necessary in many localities and many sideroads and a few main highways were blocked with snow.

TEMPERATURE

The mean temperature for the state was 30.3°, or 2.9° above the normal, and 0.9° higher than the mean for November, 1930. The highest mean reported was 36.6° at Amenia, Cass County; the lowest was 26.2° at Wishek, McIntosh County. The highest temperature reported was 78° on the 2d, 6th and 8th, at four stations in the western part of the state; the lowest was -10° on the 21st and 27th at three stations in the extreme northern part of the state. The greatest monthly range of temperature was 88° at Portal, Burke County; the least was 62° at Hillsboro, Traill County. The greatest daily range in temperature was 57° at Dickinson, Stark County on the 6th.

PRECIPITONATI

The average precipitation for the state was 0.55 inch, or 0.06 inch below the normal, and 0.32 inch less than the average for November, 1930. The greatest monthly amount reported was 1.77 inches at Grand Forks, Grand Forks County; there was none at Sanish, Mountrail County, and Turtle Lake, McLean County. The greatest amount recorded in any 24 consecutive hours was 0.90 inch at Minot, Ward County on the 21st, and at Richardton, Stark County on the 26th. The average number of days with 0.01 inch or more of precipitation was 3. The average snowfall was 5.0 inches.

AURORAS

Auroras were observed at Crosby and Foxholm on the 2d; at Crosby, Devils Lake, Eckman, Foxholm and Tagus on the 3d; at Crosby, Foxholm, Pembina and Velva on the 4th; at Bottineau, Crosby, Foxholm, Pembina, Sanish, Velva and Williston on the 5th; at Bottineau, Foxholm, Napoleon and Sanish on the 6th; at Devils Lake and Moorhead on the 7th; at Ellendale, Napoleon and Pembina on the 8th; at Foxholm and Tagus on 9th; at Eckman and Foxholm on the 10th; at Crosby on the 11th; at Crosby and Foxholm on the 12th; at Bottineau, Eckman and Foxholm on the 13th; at Howard on the 14th; at Foxholm and Hettinger on the 16th; at Howard on the 19th and 21st; at Bottineau on the 25th and 26th; and at Eckman on the 27th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ‡‡Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Dogden Butte, near Butte; Energy, Underwood; Grand Forks, University; Power, Leonard; Howard, Grenora; Stowers, Thunder Hawk, S. D.

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

VOL. XXXX BISMARCK, N. D., DECEMBER, 1931 No. 12

GENERAL SUMMARY

The month opened with temperatures somewhat below the normal, a condition which obtained until the middle of the second decade, when there was a general rise, and the mean temperature for the month was the third highest of record for December for the state. While the precipitation averaged decidedly below the normal, that which occurred was generally recorded from the 5th to the 11th, inclusive, and on the last two days of the month. Due to the absence of snow cover in most sections livestock ranged freely saving much feed; the lack of snow cover, however, was injurious to winter rye. The ice in lakes and rivers of the state was unusually thin and little ice harvesting was accomplished.

TEMPERATURE

The mean temperature for the state was 21.0°, or 8.4° above the normal, and 1.1° higher than the mean for December, 1930. The highest mean reported was 26.7° at Carson, Grant County; the lowest was 17.2° at Linton, Emmons County. The highest temperature reported was 58° at Cando, Towner County on the 18th; the lowest was -21° at Park River, Walsh County on the 4th. The greatest monthly range of temperature was 69° at Dunn Center, Dunn County; the least was 46° at New England, Hettinger County. The greatest daily range in temperature was 51° at Portal, Burke County on the 9th.

PRECIPITATION

The average precipitation for the state was 0.23 inch, or 0.29 inch below the normal, and 0.04 inch less than the average for December, 1930. The greatest monthly amount reported was 1.20 inches at Ellendale, Dickey County; there was none at four stations in the northern part of the state. The greatest amount recorded in any 24 consecutive hours was 0.91 inch at Ellendale, Dickey County on the 29-30th. The average number of days with 0.01 inch or more of precipitation was 2. The average snowfall was 2.7 inches.

AURORAS

Auroras were observed at Foxholm on the 1st; at Devils Lake, Eckman, Ellendale, Foxholm and Pembina on the 2d; at Crosby, Dogden Butte, Pembina and Stowers on the 3d; at Foxholm and Pembina on the 4th; at Eckman on the 6th; at Foxholm on the 8th; at Eckman and Foxholm on the 9th; at Ellendale and Foxholm on the 12th; at Foxholm on the 15th; at Grand Forks on the 29th; at Devils Lake, Eckman, Rugby and Willow City on the 30th; and at Foxholm and Towner on the 31st.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ‡‡Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Dogden Butte, near Butte; Energy, Underwood; Grand Forks, University; Power, Leonard; Howard, Grenora; Stowers, Thunder Hawk, S. D.

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

VOL. XXXX BISMARCK, N. D., ANNUAL, 1931 No. 13

GENERAL SUMMARY

Taken as a whole, weather conditions in North Dakota from a crop standpoint during the year were unfavorable, particularly in the northwestern portion, where decidedly droughty conditions prevailed. At the beginning of the year there was a general deficiency in the subsoil moisture, due to insufficient precipitation during the years 1929 and 1930. There was also a deficiency in precipitation during seven of the months during 1931. This droughty condition was greatly aggravated by unseasonably high temperatures, the mean for the year being the highest of record in the climatological history of the state.

The mean annual temperature for the state was 44.9°, or 5.6° above the normal, and 3.5° higher than the mean for 1930. The highest mean monthly temperature reported was 75.6° at Hankinson, Richland County, in July; the lowest was 10.2° at Langdon, Cavalier County, in January. The highest temperature reported was 111° at Fort Yates, Sioux County, on July 26th, and at Napoleon, Logan County, and Westhope, Bottineau County, on July 25th; the lowest was -31° at Towner, McHenry County, on January 13th and 14th, and February 9th.

The average annual precipitation for the state was 14.99 inches, or 2.19 inches below the normal, and 0.09 inch more than the average for 1930. The greatest annual precipitation reported was 22.98 inches at Lisbon, Ransom County; the least was 5.62 inches at Epping, Williams County. The greatest monthly amount reported was 9.27 inches at McLeod, Ransom County, in June; there was none at four stations in January, five stations in February, one station in April, two stations in November, and four stations in December. The average snowfall for the state was 18.0 inches.

The average number of days with 0.01 inch or more of precipitation was 56.

There were 180 clear days, 92 partly cloudy days and 93 cloudy days.

The prevailing wind was northwest.

THE WEATHER BY MONTHS.

JANUARY.—The weather for the month, from a personal comfort standpoint, was the most excellent of record for the state. The mean temperature was the highest and the average precipitation was the third lowest of record in the climatological history of North Dakota. There were but two stormy periods, both of short duration.

FEBRUARY.—Unusually favorable weather prevailed throughout the state during the entire month, the temperature being decidedly above and the precipitation decidedly below the normal. As a result of these favorable conditions livestock ranged freely, saving much feed, and outdoor work continued uninterruptedly.

MARCH.—During most of the month there were favorable weather conditions. Light snow occurred on many days, and during the third decade beneficial showers were quite general, greatly improving soil conditions, though considerably more moisture was needed for subsoil retention. By the close of the month preparations for spring work on farms were well advanced.

APRIL.—The weather during the month was warm and dry, the average precipitation being the second lowest for April since statewide records began in 1892. Farm work advanced rapidly, but soil conditions were mostly too dry in many sections, due about equally to lack of rainfall and to excessive evaporation caused by high winds.

MAY.—Favorable weather for farm and other outdoor work generally prevailed, but lack of precipitation, particularly in the northwestern portion, caused considerable apprehension. Although the temperature averaged above the normal, killing frosts damaged flax and gardens, and greatly retarded the growth of small grains and pastures.

JUNE.—There was a general deficiency of soil moisture at the opening of June in all parts of the state, especially in the northwestern portion, as all months since November, 1930, with the exception of March, produced less than the normal precipitation. The rainfall for the month was unevenly distributed geographically, with the result that crops deteriorated rapidly in the western portion. Small grains generally headed short in most of the central and western portions, much being cut for hay.

JULY.—Droughty conditions which prevailed over the state during most of the preceding six months were more or less relieved during the fore part of July, though not sufficiently to bring crops to anything like a normal condition. While the mean temperature was but slightly more than two degrees above the normal, one of the most outstanding periods of extreme heat in the history of the state prevailed from the 13th to the 27th, inclusive. No severe wind storms, and less than the usual number of hail storms, were reported.

AUGUST.—Although the mean temperature and average precipitation were nearly the normal, occasional periods of high temperature prevailed, and practically all precipitation was confined to the first decade and the 27-28th. Harvesting was completed during the month and much threshing was done. Much small grain was cut for feed, as the yields would not warrant harvesting and threshing costs. Some fall plowing and seeding of winter rye were accomplished, but the ground was mostly too dry at the close for good results. Pastures needed rain in all sections.

The mean departures from normal temperatures are based on records from stations that have ten or more years of observations. [a], 1 day missing, [b], 2 days missing, etc.

[Continued from page 49]

SEPTEMBER.—Unusually high temperature and deficient precipitation prevailed over most of the state during the first decade. The second decade, though somewhat cooler, continued dry. During these two decades threshing and late flax harvesting made excellent progress; the ground, however, was mostly too dry for fall plowing and seeding of winter rye, and pastures deteriorated considerably. The last decade was both wet and cooler, improving conditions for fall plowing and potato digging. Early planted rye germinated quite favorably. Corn shocking and silo filling were nearly completed at the close of the month.

OCTOBER.—Mild temperature and pleasant weather prevailed generally. During the first decade only light precipitation occurred, allowing fall work on farms, consisting of seeding winter rye, fall plowing, potato digging and corn husking, to progress rapidly, though the ground was somewhat dry in some sections for plowing and potato digging. Generous showers occurred during the latter portion of the month.

NOVEMBER.—Mild temperature prevailed in all sections during the first two decades and during this period only light scattered precipitation occurred. The last decade was much colder with light to heavy snow over most sections. During the first mentioned period highways were in excellent condition, and livestock ranged freely on ranges, pastures and harvested fields. Corn picking and other late farm work made good progress. During the last decade much yard feeding of livestock was necessary in many localities, and a few of the main highways and many sideroads were blockaded with snow.

DECEMBER.—The month opened with temperature somewhat below normal, a condition which prevailed until the middle of the second decade, when there was a general rise, and the mean temperature for the month was the third highest of record for December for the state. There was less than the normal precipitation, occurring generally from the 5th to the 11th, inclusive, and on the last two days of the month. Due to absence of snow cover in most sections livestock ranged freely; the lack of cover, however, was injurious to winter rye. The ice in lakes and rivers of the state was unusually thin and little ice harvesting was accomplished.

Climatological Summary, 1931

ORRIS W. ROBERTS, Meteorologist

VOL. XXXXI BISMARCK, N. D., JANUARY, 1932 No. 1

GENERAL SUMMARY

The weather was somewhat changeable. Scattered snows during the latter portion of the first decade and during the second decade totaled more than the monthly normal. While the temperature averaged in excess of the normal, subzero readings were frequent, and, being accompanied by occasional high winds, blocked sideroads and many main highways, and necessitated considerable yard feeding of livestock. Ice harvest made excellent progress.

TEMPERATURE

The mean temperature for the state was 9.5°, or 3.3° above the normal, and 11.9° lower than the mean for January, 1931. The highest mean reported was 14.2° at Wahpeton, Richland County; the lowest was 3.1° at Portal, Burke County. The highest temperature reported was 50° at Berthold Agency, McLean County on the 11th, and at Washburn, McLean County on the 12th; the lowest was -34° at Willow City, Bottineau County on the 31st. The greatest monthly range of temperature was 77° at Minot, Ward County; the least was 56° at Moorhead, Minn., Clay County. The greatest daily range in temperature was 48° at Mohall, Renville County on the 28th.

PRECIPITATION

The average precipitation for the state was 0.55 inch, or 0.08 inch above the normal, and 0.40 inch higher than the average for January, 1931. The greatest monthly amount reported was 1.60 inches at Dunseith, Rolette County; the least was a trace at Cooperstown, Griggs County and Howard, Williams County. The greatest amount recorded in any 24 consecutive hours was 1.10 inches at Richardton, Stark County on the 18th. The average number of days with 0.01 inch or more of precipitation was 4. The average snowfall was 6.3 inches.

AURORAS

Auroras were observed at Grand Forks on the 1st; at McLeod and Williston on the 3d; at Bottineau on the 7th; at Grand Forks on the 9th and 10th; at Napoleon on the 21st; at Eckman on the 26th; at Willow City on the 29th; at Devils Lake on the 30th; and at McLeod and Napoleon on the 31st.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, a, b, c, appearing in the table indicate number of days missing; for example, b represents two days, etc.

†Also on other dates. ‡‡Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Dogden Butte, near Butte; Energy, Underwood; Grand Forks, University; Power, Leonard; Howard, Grenora; Stowers, Thunder Hawk, S. D

Daily Precipitation for January, 1932

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

Vol. XXXXI   Bismarck, N. D., February, 1932   No. 2

GENERAL SUMMARY

The month opened with subnormal temperatures, a condition that prevailed until the end of the second decade. During this period most of the snowfall for the month occurred, and being occasionally accompanied by high winds caused considerable blocking of highways, and necessitated much yard feeding of livestock. The last decade, however, was mild and pleasant, the mean temperature being decidedly above normal, with only light scattered snow. The snow covering was greatly reduced, and the ice in some of the smaller streams broke up.

TEMPERATURE

The mean temperature for the state was 13.6°, or 3.4° above the normal, and 14.4° lower than the mean for February, 1931. The highest mean reported was 19.6° at Beach, Golden Valley County; the lowest was 2.2° at Langdon, Cavalier County. The highest temperature reported was 69° at Pettibone, Kidder County on the 28th; the lowest was -31° at three stations in the north-central part of the state on the 1st, 8th and 14th. The greatest monthly range of temperature was 94° at Eckman, Bottineau County; the least was 65° at Langdon, Cavalier County. The greatest daily range in temperature was 51° at Portal, Burke County on the 19th.

PRECIPITATION

The average precipitation for the state was 0.35 inch, or 0.14 inch below the normal, and 0.07 inch higher than the average for February, 1931. The greatest monthly amount reported was 1.06 inches at Hillsboro Traill, County; there was none at Edgeley, Lamoure County and Richardton, Stark County. The greatest amount recorded in any 24 consecutive hours was 0.67 inch at Hillsboro, Traill County on the 8th. The average number of days with 0.01 inch or more of precipitation was 3. The average snowfall was 4.3 inches.

AURORAS

Auroras were observed at Devils Lake, Eckman, Foxholm and Hettinger on the 2d; at Devils Lake, Eckman, McLeod, Stowers, Trotters and Williston on the 3d; at Eckman, Foxholm and Trotters on the 4th; at Ellendale and Trotters on the 5th; at Moorhead on the 7th; at Rugby on the 9th; at Trotters on the 12th; at Eckman, Foxholm, Grand Forks and Pembina on the 13th; at Moorhead on the 15th; at Eckman on the 24th; and at Epping on the 25th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, a, b, c, appearing in the table indicate number of days missing; for example, b represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Dogden Butte, near Butte; Energy, Underwood; Grand Forks, University; Power, Leonard; Howard, Grenora; Stowers, Thunder Hawk, S. D.

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

28

ORRIS W. ROBERTS, Meteorologist

VOL. XXXXI BISMARCK, N. D., MARCH, 1932 No. 3

GENERAL SUMMARY

Unseasonably low temperature prevailed in all sections during the first and second decades, and the mean for the month was the lowest for March during the past eight years. The precipitation, while averaging nearly the normal, was somewhat unevenly distributed. Livestock required much yard feeding, especially during the first and second decades. Practically no spring work on farms was accomplished. The surface moisture of the soil was generally excellent, with the exception of the extreme northwest section, but nearly all portions reported a deficiency in moisture content in the subsoil.

TEMPERATURE

The mean temperature for the state was 18.9°, or 5.2° below the normal, and 6.8° lower than the mean for March, 1931. The highest mean reported was 23.8° at Marmarth, Slope County; the lowest was 10.4° at Powers Lake, Burke County. The highest temperature reported was 64° at Hankinson, Richland County on the 29th; the lowest was -30° at Powers Lake, Burke County on the 22d. The greatest monthly range of temperature was 81° at Bottineau, Bottineau County, and Eckman, Bottineau County; the least was 57° at Langdon, Cavalier County, and Pembina, Pembina County. The greatest daily range in temperature was 53° at Valley City, Barnes County on the 23d.

PRECIPITATION

The average precipitation for the state was 0.63 inch, or 0.07 inch below the normal, and 0.31 inch less than the average for March, 1931. The greatest monthly amount reported was 2.40 inches at Alpha, Golden Valley County; the least was a trace at Grafton, Walsh County, and Howard, Williams County. The greatest amount recorded in any 24 consecutive hours was 1.00 inch at Hansboro, Towner County on the 29th. The average number of days with 0.01 inch or more of precipitation was 6. The average snowfall was 6.0 inches.

AURORAS

Auroras were observed at Eckman, Foxholm, Howard McClusky and Williston on the 2d; at Howard on the 3d; at Devils Lake, Edmore, Foxholm, Howard and Willow City on the 4th; at Eckman, Edmore, Foxholm and Williston on the 5th; at Howard on the 6th; at Devils Lake, Edmore and Foxholm on the 8th; at Devils Lake, Eckman, Edmore, Foxholm, Grand Forks, Rugby, Tagus, Trotters, Velva, Williston and Willow City on the 9th; at Devils Lake, Eckman, Edmore, Foxholm, Grand Forks, Pembina, Sharon and Willow City on the 10th; at Pembina on the 11th; at Foxholm on the 12th; at Pembina and Rugby on the 13th; at Williston on the 15th; at Grand Forks on the 22d; at Eckman on the 24th; at McClusky on the 26th; at Devils Lake, Eckman, Edmore, Oakes and Tagus on the 27th; at Carson and Oakes on the 28th; at Dogden Butte and Eckman on the 29th; at Bottineau, Crosby, Devils Lake, Eckman, Edmore, Ellendale, Foxholm, Rugby, Sharon and Willow City on the 30th; and at Foxholm, McLeod and Oakes on the 31st.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, a, b, c, appearing in the table indicate number of days missing; for example, b represents two days, etc.

†Also on other dates. ‡‡Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Dogden Butte, near Butte; Energy, Underwood; Grand Forks, University; Power, Leonard; Howard, Grenora; Stowers, Thunder Hawk, S. D.

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

Vol. XXXXI Bismarck, N. D., April, 1932 No. 4

GENERAL SUMMARY

Due to wet grounds spring work on farms was delayed in many sections, and it was not until the beginning of the second decade that much farm work was accomplished. During the second and third decades progress was made in seeding of spring wheat, oats, barley, speltz and spring rye, and at the close of the month was nearing completion in the south portion. Early planted grains were up to good stand and color, and both tame and wild grasses afforded ample food for livestock.

TEMPERATURE

The mean temperature for the state was 44.1°, or 2.5° above the normal, and the same as the mean for April, 1931. The highest mean reported was 48.8° at Fort Yates, Sioux County; the lowest was 38.7° at Langdon, Cavalier County. The highest temperature reported was 79° at Minot, Ward County on the 17th; the lowest was zero at Pembina, Pembina County on the 3d. The greatest monthly range of temperature was 72° at Pembina, Pembina County; the least was 56° at Fort Yates, Sioux County, Parshall, Mountrail County, and Williston, Williams County. The greatest daily range in temperature was 49° at Grafton, Walsh County on the 19th.

PRECIPITATION

The average precipitation for the state was 2.16 inches, or 0.77 inch above the normal, and 1.73 inches more than the average for April, 1931. The greatest monthly amount reported was 6.00 inches at Napoleon, Logan County; the least was 0.38 inch at Bottineau, Bottineau County. The greatest amount recorded in any 24 consecutive hours was 4.20 inches at Napoleon, Logan County on the 23d. The average number of days with 0.01 inch or more of precipitation was 8. The average snowfall was 0.7 inch.

AURORAS

Auroras were observed at McLeod on the 1st; at Eckman, Edmore, Foxholm, Grand Forks and Willow City on the 2d; at Bottineau, Hannah, Rugby and Stowers on the 3d; at Bismarck, Bottineau, Carson, Devils Lake, Eckman, Edmore, Foxholm, Grand Forks, Napoleon and Sharon on the 4th; at Bismarck, Crosby and Dogden Butte on the 5th; at Devils Lake, Eckman, Foxholm, Stowers and Tagus on the 6th; at Hannah on the 7th; at Rugby, Trotters and Willow City on the 9th; at Devils Lake, Edmore, Foxholm and Pembina on the 13th; at Crosby, Devils Lake, Edmore, Foxholm, Grand Forks and Pembina on the 14th; at Pembina on the 15th; at Epping on the 19th; at Moorhead, Minn. on the 23d; at Cooperstown, Devils Lake, Eckman, Fessenden, Foxholm, Grand Forks, Rugby, Tagus and Moorhead, Minn. on the 25th; at Devils Lake, Eckman, Fessenden, Foxholm, Grand Forks, Rugby and Tagus on the 26th; at Parshall on the 27th; at Crosby and Eckman on the 28th; and at Crosby on the 29th and 30th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Dogden Butte, near Butte; Energy, Underwood; Grand Forks, University; Power, Leonard; Howard, Grenora; Stowers, Thunder Hawk, S. D.

Daily Precipitation for April, 1932

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

Vol. XXXXI   Bismarck, N. D., May, 1932   No. 5

GENERAL SUMMARY

The favorable weather conditions that obtained at the opening of the month continued throughout the first and second decades, and during this period rapid progress was made in seeding small grains, in plowing for and planting corn and potatoes, and in seeding flax. Soil conditions, except in the extreme northwestern and north-central portions were good to excellent, and crops of all kinds made rapid growth. Due to heavy rains during the last decade farm work was somewhat delayed, but crops of all kinds, including pastures, ranges and meadows, were greatly benefitted, and conditions at the close of the month were the best for several years. The heavy rains greatly reduced the menace from grasshoppers.

TEMPERATURE

The mean temperature for the state was 55.9°, or 3.1° above the normal, and 28° higher than the mean for May, 1931. The highest mean reported was 59.8° at Hankinson, Richland County; the lowest was 53.3° at Berthold Agency, McLean County. The highest temperature reported was 98° at Westhope, Bottineau County on the 13th; the lowest was 25° at ten stations on the first and other dates. The greatest monthly range of temperature was 71° at Westhope, Bottineau County; the least was 58° at Ellendale, Dickey County, and Wishek, McIntosh County. The greatest daily range in temperature was 54° at Crosby, Divide County on the 22d.

PRECIPITATION

The average precipitation for the state was 2.14 inches, or 0.26 inch below the normal, and 0.73 inch more than the average for May, 1931. The greatest monthly amount reported was 4.50 inches at Jamestown, Stutsman County; the least was 0.21 inch at Parshall, Mountrail County. The greatest amount recorded in any 24 consecutive hours was 2.41 inches at McClusky, Sheridan County on the 26th. The average number of days with 0.01 inch or more of precipitation was 6. The average snowfall was 2.2 inches.

AURORAS

Auroras were observed at Crosby, Devils Lake and Eckman on the first; at Carson, Crosby, Devils Lake, Velva, Williston, Willow City and Moorhead, Minn. on the 2d; at Crosby and Foxholm on the 3d; at Eckman and Foxholm on the 6th; at Powers Lake on the 9th; at Eckman and Edmore on the 10th; at Foxholm on the 11th; at Devils Lake and Fessenden on the 12th; at Crosby and Foxholm on the 13th; at Crosby on the 14th; at Eckman on the 22d; at Devils Lake and Eckman on the 23d; at Carson, Edmore, Foxholm and Pettibone on the 24th; at Hannah on the 25th; at Epping on the 26th; at Howard on the 27th; at Arnegard, Edmore, Grand Forks, Howard, Pembina, Sharon and Trotters on the 28th; at Crosby, Edmore, Grafton, Grand Forks, Hettinger, Larimore, New England, Parshall, Petersburg and Trotters on the 29th; and at Bowman, Crosby, Hannah and Oakes on the 30th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Dogden Butte, near Butte; Energy, Underwood; Grand Forks, University; Power, Leonard; Howard, Grenora; Stowers, Thunder Hawk, S. D.

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

VOL. XXXXI BISMARCK, N. D., JUNE, 1932 No. 6

GENERAL SUMMARY

Taken as a whole, the weather conditions throughout North Dakota were favorable, and at the close of the month crop prospects were the best for several years. The precipitation was quite evenly distributed both geographically and throughout the month, the average for the state being slightly in excess of the normal. Generous rains occurred in most sections during the first and second decades, while scattered showers prevailed throughout the last decade. These heavy and scattered showers greatly reduced the grasshopper menace, and only small damage was reported. The hay crop was generally abundant, and first cuttings of tame grasses were mostly in stack. Livestock and pastures were excellent.

TEMPERATURE

The mean temperature for the state was 67.0°, or 4.5° above the normal, and 1.4° higher than the mean for June, 1931. The highest mean reported was 71.1° at Wahpeton, Richland County; the lowest was 64.2° at Howard, Williams County. The highest temperature reported was 98° at Hankinson and Wahpeton, in Richland County on the 24th; the lowest was 34° at Willow City, Bottineau County on the 30th. The greatest monthly range of temperature was 54° at Powers Lake, Burke County; the least was 35° at Devils Lake, Ramsey County. The greatest daily range in temperature was 45° at Hansboro, Towner County on the 22d.

PRECIPITATION

The average precipitation for the state was 3.83 inches, or 0.38 inch above the normal, and 1.48 inches more than the average for June, 1931. The greatest monthly amount eported was 8.22 inches at Powers Lake, Burke County; the east was 1.11 inches at Hillsboro, Traill County. The greatest mount recorded in any 24 consecutive hours was 5.19 inches t Edgeley, Lamoure County on the 17th. The average number of days with 0.01 inch or more of precipitation was 10.

AURORAS

Auroras were observed at Tagus on the 4th; at Crosby and Tagus on the 5th; at Eckman on the 7th; at Powers Lake on he 9th; at Bottineau on the 12th; at Foxholm on the 21st; at Howard on the 25th; at Eckman on the 26th; and at Crosby on he 28th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Dogden Butte, near Butte; Energy, Underwood; Grand Forks, University; Power, Leonard; Howard, Grenora; Stowers, Thunder Hawk, S. D.

Daily Precipitation for June, 1932

ORRIS W. ROBERTS, Meteorologist

Vol. XXXXI   Bismarck, N. D., July, 1932   No. 7

GENERAL SUMMARY

Favorable weather prevailed generally at the opening of the month and crop prospects were nearly normal. Small grains were mostly headed and general rains from the 3d to the 5th, inclusive, were very beneficial. Unseasonably high temperature prevailed during the last two decades, greatly reducing the soil moisture and caused late crops and corn to deteriorate considerably. Except for scattered showers on the 19th and 20th, there was practically no precipitation of importance during this period. Harvesting, combining and threshing were well advanced. Some reports of damage from grasshoppers were received. Pastures and ranges at the close of the month were greatly in need of rain, although livestock were generally in good condition.

TEMPERATURE

The mean temperature for the state was 70.0°, or 1.6° above the normal, and 0.6° lower than the mean for July, 1931. The highest mean reported was 74.5° at Wahpeton, Richland County; the lowest was 64.5° at Hansboro, Towner County. The highest temperature reported was 108° at Max, McLean County on the 17th; the lowest was 36° at Hansboro, Towner County on the 1st and 2d. The greatest monthly range of temperature was 71° at Max, McLean County; the least was 49° at Pembina, Pembina County. The greatest daily range in temperature was 54° at Hansboro, Towner County on the 23d.

PRECIPITATION

The average precipitation for the state was 2.01 inches, or .41 inch below the normal, and 1.02 inches less than the iverage for July, 1931. The greatest monthly amount eported was 5.95 inches at Dunseith, Rolette County; the east was 0.68 inch at Bowman, Bowman County. The greatest mount recorded in any 24 consecutive hours was 3.00 inches t Dunseith, Rolette County on the 31st. The average numer of days with 0.01 inch or more of precipitation was 7.

AURORAS

Auroras were observed at Eckman on the 1st; at Arnegard on he 4th; at Bottineau, Devils Lake, Ellendale, Howard, Velva nd Moorhead on the 5th; at Bowman, Dogden Butte, Ellenlale, Edmore, Epping and Foxholm on the 6th; at Eckman, Ellendale and Epping on the 7th; at Crosby and Rugby on the th; at Devils Lake, Eckman and Edmore on the 9th; at Crosby n the 16th; at Parshall on the 17th; at Eckman on the 22d nd 23d; at Howard and Velva on the 25th; at Eckman on the 6th; at Howard on the 28th; at Eckman and Howard on the 9th; and at Howard on the 30th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Dogden Butte, near Butte; Energy, Underwood; Grand Forks, University; Power, Leonard; Howard, Grenora; Stowers, Thunder Hawk, S. D.

Daily Precipitation for July, 1932

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

VOL. XXXI BISMARCK, N. D., AUGUST, 1932 No. 8

GENERAL SUMMARY

Generally favorable weather for farm and other outdoor work prevailed, though too dry for late crops, pastures and ranges. Threshing made excellent progress but less than the usual marketing was done, farmers being advised generally to store grain for better prices. Droughty conditions prevailed at the close of the month in many sections, and less than the usual fall plowing and seeding of winter rye was accomplished. Livestock was generally in good condition.

TEMPERATURE

The mean temperature for the state was 68.3°, or 2.1° above the normal, and 1.3° higher than the mean for August, 1931. The highest mean reported was 72.9° at Wahpeton, Richland County; the lowest was 63.1° at Hansboro, Towner County. The highest temperature reported was 100° at Amenia on the 3d, at Fort Yates on the 23d, and at Napoleon on the 15th; the lowest was 28° at Hansboro, Towner County on the 18th. The greatest monthly range of temperature was 64° at Fort Yates, Sioux County; the least was 42° at Williston, Williams County. The greatest daily range in temperature was 56° at Linton, Emmons County on the 3d.

PRECIPITATION

The average precipitation for the state was 1.82 inches, or 0.22 inch below the normal, and 0.27 inch less than the average for August, 1931. The greatest monthly amount reported was 4.46 inches at Forman, Sargent County; the least was 0.35 inch at Steele, Kidder County. The greatest amount recorded in any 24 consecutive hours was 2.33 inches at Hannah, Cavalier County on the 25th. The average number of days with 0.01 inch or more of precipitation was 7.

AURORAS

Auroras were observed at Bismarck, Foxholm, Howard, Tagus, Velva and Williston on the 1st; at Bismarck and Foxholm on the 2d; at Foxholm, Grand Forks, Kenmare, Parshall, Pettibone and Sharon the 3d; at Eckman, Ellendale and Parshall on the 4th; at Dogden Butte on the 5th; at Foxholm and Howard on the 8th; at Howard on the 10th; at Foxholm n the 11th; at Crosby and Foxholm on the 12th; at Parshall n the 13th; at Howard on the 17th; at Tagus on the 19th; t Pembina on the 20th; at Eckman on the 23d; at Howard n the 25th; at Eckman, Foxholm and Pembina on the 27th; t Pembina on the 28th; at Devils Lake and Eckman on the 9th; and at Devils Lake on the 30th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Dogden Butte, near Butte; Energy, Underwood; Grand Forks, University; Power, Leonard; Howard, Grenora; Stowers, Thunder Hawk, S. D.

Daily Precipitation for August, 1932

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

VOL. XXXXI BISMARCK, N. D., SEPTEMBER, 1932 No. 9

GENERAL SUMMARY

While the weather throughout the state was favorable for farm and other outdoor work, the deficiency in precipitation not only retarded plant development, but greatly interfered with fall plowing and the seeding of winter rye. At the close of the month flax harvesting and threshing of small grains were practically completed. Corn matured early and no frost damage was reported. Corn shocking and silo filling were mostly completed by the end of the second decade and during the third decade corn picking made good progress.

TEMPERATURE

The mean temperature for the state was 56.8°, or 0.4° above the normal, and 4.6° lower than the mean for September, 1931. The highest mean reported was 61.4° at Wahpeton, Richland County; the lowest was 53.3° at Bottineau, Bottineau County. The highest temperature reported was 102° at Max, McLean County on the 8th; the lowest was 22° at Bottineau, Bottineau County on the 27th, and at Eckman, Bottineau County on the 22d and 28th. The greatest monthly range of temperature was 75° at Max, McLean County; the least was 51° at Moorhead, Clay County, Minn. The greatest daily range in temperature was 57° at Powers Lake, Burke County on the 10th.

PRECIPITATION

The average precipitation for the state was 0.64 inch, or 1.01 inches below the normal, and 1.50 inches less than the average for September, 1931. The greatest monthly amount reported was 2.26 inches at Amenia, Cass County; the least was a trace at Berthold Agency, McLean County, and Fryburg, Billings County. The greatest amount recorded in any 24 consecutive hours was 1.57 inches at Cando, Towner County on the 26th. The average number of days with 0.01 inch or more of precipitation was 3.

AURORAS

Auroras were observed at Pembina and Towner on the 4th; at Carson, Devils Lake, Eckman, Foxholm, Pembina, Petersburg, Tagus, Trotters and Moorhead on the 5th; at Dogden Butte, Dunn Center, Ellendale, McLeod, Petersburg, Pettibone, Tagus, Towner and Moorhead on the 6th; at Arnegard, Devils Lake, Eckman, Edmore, Epping, Foxholm, Grand Forks, Pembina, Petersburg, Pettibone, Rugby, Tagus and Trotters on the 7th; at Eckman, Grand Forks, Hansboro, Pembina, Pettibone and Towner on the 8th; at Foxholm and Pettibone on the 9th; at Pettibone on the 10th; at Bismarck and Howard on the 11th; at Pembina on the 13th; at Edmore on the 17th and 18th; at Eckman and Foxholm on the 19th; at Foxholm on the 20th; at Devils Lake and Foxholm on the 21st; at Foxholm and Williston on the 22d; at Devils Lake, Eckman, Ellendale, Fessenden, Foxholm, Gackle, Howard and Oakes on the 23d; at Bottineau, Eckman, Ellendale, Pettibone and Moorhead on the 24th; at Arnegard, Edmore, Rugby and Willow City on the 26th; at Arnegard and Foxholm on the 27th; at Foxholm and Pembina on the 29th; and at Williston on the 30th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

††Post-office addresses of these stations are: Berthold Agency, Elbowoods; Dogden Butte, near Butte; Energy, Underwood; Grand Forks, University; Power, Leonard; Howard, Grenora; Stowers, Thunder Hawk, S. D.

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

VOL. XXXXI BISMARCK, N. D., OCTOBER, 1932 No. 10

GENERAL SUMMARY

The month opened with temperature considerably above the normal, and with but little precipitation during the first decade. Due to dry soil late fall plowing and seeding of winter rye were generally abandoned, and considerable difficulty was experienced in potato digging. A general storm covered the greater portion of the state from the 17th to the 20th, inclusive, with high winds, light to heavy snow and subnormal temperature. Great damage to telephone, telegraph and power lines was occasioned by one of the most severe sleet storms in recent years. Corn husking made good progress during the first part of the month, but was greatly delayed during the latter part due to snow covered fields.

TEMPERATURE

The mean temperature for the state was 38.3°, or 5.2° below the normal, and 9.4° lower than the mean for October, 1931. The highest mean reported was 44.4° at Wahpeton, Richland County; the lowest was 32.0° at Portal, Burke County. The highest temperature reported was 90° at New England, Hettinger County on the 1st; the lowest was -3° at Westhope, Bottineau County on the 29th. The greatest monthly range of temperature was 86° at Westhope, Bottineau County; the least was 56° at Hillsboro, Traill County. The greatest daily range in temperature was 56° at Willow City, Bottineau County on the 5th.

PRECIPITATION

The average precipitation for the state was 2.31 inches, or 1.27 inches above the normal, and 0.92 inch more than the average for October, 1931. The greatest monthly amount reported was 4.11 inches at Larimore, Grand Forks County; the least was 0.66 inch at Tagus, Mountrail County. The greatest amount recorded in any 24 consecutive hours was 2.35 inches at Grafton, Walsh County on the 19th. The average number of days with 0.01 inch or more of precipitation was 8. The average snowfall was 9.1 inches.

AURORAS

Auroras were observed at Bismarck and Rugby on the 2d; at Bismarck and Foxholm on the 3d; at Crosby and Eckman on the 4th; at Eckman on the 5th; at Bismarck and Crosby on the 15th; at Arnegard, Bismarck, Bottineau, Carson, Crosby, Devils Lake, Eckman, Edmore, Ellendale, Fessenden, Foxholm, Grand Forks, Hettinger, Howard, Larimore, New England, Oakes, Pembina, Petersburg, Pettibone, Rugby, Sharon, Stanton, Towner, Trotters, Velva, Washburn, Williston, Willow City and Moorhead, Minn., on the 20th; at Ashley, Ellendale, Napoleon, New England, Pembina, Trotters and Moorhead, Minn. on the 21st; at Crosby, Fessenden, Foxholm, Petersburg, Stanton and Trotters on the 22d; at Eckman on the 24th and 29th; and at Fullerton, Oakes and Pembina on the 31st.

ERRATA

June, 1932, Page 21: Under heading TEMPERATURE, second line, change 1.4° higher to 1.4° lower than the mean. Page 22: Velva mean temperature, 68.5°.
September, 1932, Page 34: Hankinson mean temperature, 59.6°.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ᵃ, ᵇ, ᶜ, appearing in the table indicate number of days missing; for example, ᵇ represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Dogden Butte, near Butte; Energy, Underwood; Grand Forks, University; Power, Leonard; Howard, Grenora; Stowers, Thunder Hawk, S. D.

Daily Precipitation for October, 1932

ORRIS W. ROBERTS, Meteorologist

VOL. XXXXI BISMARCK, N. D., NOVEMBER, 1932 No. 11

GENERAL SUMMARY

Rather disagreeable weather prevailed throughout the state during the first two decades, the temperature averaging below the normal, with occasional high winds and snow. As a result of these adverse conditions, there was much yard feeding of livestock required, and auto travel was greatly impeded. The last decade was generally fair with mild temperature, which caused a rapid diminution in snow covering, and allowed livestock to range on pastures and harvested fields.

TEMPERATURE

The mean temperature for the state was 25.2°, or 2.2° below the normal, and 5.1° lower than the mean for November, 1931. The highest mean reported was 32.0° at New England, Hettinger County; the lowest was 17.4° at Hannah, Cavalier County, and Pembina, Pembina County. The highest temperature reported was 70° at McLeod, Ransom County on the 7th; the lowest was -17° at Richardton, Stark County on the 15th. The greatest monthly range of temperature was 84° at McLeod, Ransom County; the least was 52° at Langdon, Cavalier County. The greatest daily range in temperature was 51° at Napoleon, Logan County on the 19th.

PRECIPITATION

The average precipitation for the state was 0.49 inch, or 0.12 inch below the normal, and 0.06 inch less than the average for November, 1931. The greatest monthly amount reported was 2.69 inches at Hansboro, Towner County; the least was a trace at Fort Yates, Sioux County, and Stowers, Adams County. The greatest amount recorded in any 24 consecutive hours was 2.60 inches at Hansboro, Towner County on the 10th. The average number of days with 0.01 inch or more of precipitation was 4. The average snowfall was 4.6 inches.

AURORAS

Auroras were observed at Bottineau, Eckman, Oakes and Williston on the first; at Pembina on the 2d; at Devils Lake, Eckman, Edmore, Foxholm and Rugby on the 3d; at Devils Lake, Eckman, Foxholm, Pembina and Pettibone on the 4th; at Howard on the 9th; at Epping on the 12th; at Eckman on the 16th; at Devils Lake and Moorhead, Minn. on the 18th; at Foxholm and Howard on the 19th; at Howard on the 22d; at Eckman and Grand Forks on the 26th; at Eckman, Foxholm, Hettinger and Pembina on the 28th; and at Foxholm on the 29th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, a, b, c, appearing in the table indicate number of days missing; for example, b represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods: Dogden Butte, near Butte: Energy, Underwood: Grand Forks, University: Power, Leonard: Howard, Grenora: Stowers, Thunder Hawk, S. D.

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

VOL. XXXXI   BISMARCK, N. D., DECEMBER, 1932   No. 12

GENERAL SUMMARY

Changeable weather characterized the weather of the month. Mild temperature prevailed during the first six days, being followed by decidedly colder until the 17th, when milder weather again prevailed and continued to the close of the month. The precipitation was decidedly below the normal, being confined to light snows, mostly during the periods 3d-6th, and 10th-13th. Some of these snows were accompanied by high winds, which blocked some highways and necessitated some yard feeding of livestock.

TEMPERATURE

The mean temperature for the state was 12.4°, or 0.2° below the normal, and 8.6° lower than the mean for December, 1931. The highest mean reported was 19.9° at Crosby, Divide County; the lowest was 4.1° at Howard, Williams County. The highest temperature reported was 60° at Fort Yates, Sioux County on the 4th; the lowest was -31° at Howard, Williams County on the 21st. The greatest monthly range of temperature was 85° at Ellendale, Dickey County; the least was 52° at Crosby, Divide County. The greatest daily range in temperature was 51° at Mohall, Renville County on the 5th.

PRECIPITATION

The average precipitation for the state was 0.18 inch, or 0.34 inch below the normal, and 0.05 inch less than the average for December, 1931. The greatest monthly amount reported was 0.80 inch at Howard, Williams County; there was none at Portal, Burke County, and Zap, Mercer County. The greatest amount recorded in any 24 consecutive hours was 0.80 inch at Howard, Williams County on the 1st. The average number of days with 0.01 inch or more of precipitation was 3. The average snowfall was 1.7 inches.

AURORAS

Auroras were observed at Foxholm and Williston on the 1st; at Crosby on the 3d; at Foxholm and Pembina on the 4th; at Arnegard on the 7th; at Pembina on the 8th; at Rugby on the 14th and 15th; at Stowers on the 17th; at Arnegard, Grand Forks and Pembina on the 24th; at Devils Lake, Eckman, Edmore, Foxholm, Rugby and Sanish on the 25th; at Dogden Butte, Edmore, Foxholm, New Salem, Pembina and Sanish on the 26th; at Pettibone and Williston on the 27th; and at Eckman, Foxholm and Rugby on the 30th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ᵃ, ᵇ, ᶜ, appearing in the table indicate number of days missing; for example, ᵇ represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Dogden Butte, near Butte; Energy, Underwood; Grand Forks, University; Power, Leonard; Howard, Grenora; Stowers, Thunder Hawk, S. D.

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

VOL. XLI BISMARCK, N. D., ANNUAL, 1932 No. 13

GENERAL SUMMARY

While the average annuals of both temperature and precipitation for the state for the year were nearly normal, the temperature being 0.7° above, and the precipitation 0.07 inch below the normal, crop yields varied greatly and were generally somewhat unsatisfactory. Due to decidedly deficient precipitation during the three preceding years, there was at the opening of the year a marked deficiency in both surface and subsoil moisture, and more than the normal rainfall was required to produce a normal crop. During the crop season precipitation was deficient during May, July, August and September.

The average annual temperature for the state was 40.0°, or 0.7° above the normal, and 4.9° lower than the average for 1931. The highest average temperature reported was 43.9° at Wahpeton, Richland County; the lowest was 35.5° at Langdon, Cavalier County. The highest temperature reported was 108° at Max, McLean County, on July 17th; the lowest was -34° at Eckman and Willow City, both in Bottineau County, on January 31st.

The average annual precipitation for the state was 17.11 inches, or 0.07 inch below the normal, and 2.12 inches more than the average for 1931. The greatest annual precipitation reported was 23.13 inches at Cavalier, Pembina County; the least was 10.07 inches at Portal, Burke County. The greatest monthly amount reported was 8.22 inches at Powers Lake, Burke County, in June; there was none at Edgeley and Richardton in February, and at Portal and Zap in December. The average snowfall for the state was 34.9 inches.

The average number of days with 0.01 inch or more of precipitation was 69.

There were 156 clear days, 108 partly cloudy days and 102 cloudy days.

The prevailing wind was northwest.

THE WEATHER BY MONTHS.

JANUARY.—Changeable weather characterized the weather for the month, the greater portion of the precipitation occurring between the 6th and 21st, inclusive. While the temperature averaged in excess of the normal, subzero readings were frequent, and being accompanied by occasional high winds blocked many highways.

FEBRUARY.—During the first two decades unseasonably low temperatures prevailed, and during this period most of the snowfall occurred. High winds were frequent and caused considerable blocking of highways, and necessitated much yard feeding of livestock. The last decade was mild and pleasant, and the snow covering was greatly reduced.

MARCH.—Unseasonably low temperature prevailed during the first and second decades, the mean for the month being the lowest for March for a period of eight years. Much yard feeding of livestock was required throughout the month, especially during the first two decades.

APRIL.—Due to wet grounds spring work on farms was delayed in many sections, not much being accomplished until the middle of the month. Rapid progress, however, was made in seeding of spring wheat, oats, barley, speltz and spring rye, and at the close of the month was nearing completion in the south portion. Early planted grains were up to good stand and color, and both tame and wild grasses afforded ample food for livestock.

MAY.—Favorable weather conditions prevailed during the first and second decades, and rapid progress was made in completing the seeding of small grains, and in plowing for and planting corn and potatoes. Except in the extreme northwestern and north-central portions, soil conditions were excellent. Some delay in farm work occurred during the last decade by heavy rains.

JUNE.—Taken as a whole, the weather conditions throughout North Dakota were favorable, and at the close of the month crop prospects were the best for several years. Generous rains in most sections occurred during the first and second decades, while scattered showers occurred during the last decade. These heavy and scattered showers greatly reduced the grasshopper menace, and only small damage was reported. The hay crop was generally abundant.

JULY.—Favorable weather prevailed generally at the opening of the month and crop prospects were nearly normal. Small grains were mostly headed and general rains from the 3d to the 5th, inclusive, were very beneficial. However, unseasonably high temperature prevailed during the last two decades, greatly reducing soil moisture, and caused late crops and corn to deteriorate rapidly. Except for scattered showers on the 19th and 20th, there was practically no precipitation of importance during this period. Harvesting, combining and threshing made excellent progress.

AUGUST.—Generally favorable weather for farm and other outdoor work prevailed, though too dry for late crops, pastures and ranges. Harvesting of small grains was mostly completed and threshing made excellent progress. Less than the usual marketing was done, farmers being advised generally to store grain for better prices.

SEPTEMBER.—While the weather throughout the state was favorable for outdoor work, the deficiency in precipitation not only retarded plant development, but greatly interfered with fall plowing and the seeding of winter rye. Threshing made excellent progress and at the close of the month was nearing

The mean departures from normal temperatures are based on records from stations that have ten or more years of observations. [a], 1 day missing, [b], 2 days missing, etc.

[Continued from page 49]

completion. Corn shocking and silo filling were also well advanced.

OCTOBER.—The month opened with temperature considerably above the normal, and but little precipitation occurred during the first two decades, which continued to interfere with fall plowing and the seeding of winter rye. A general storm covered the state from the 17th to the 20th, inclusive, with high winds, light to heavy snow and subnormal temperature. Great damage to telephone, telegraph and power lines was occasioned by one of the most severe sleet storms in recent years. Corn husking made good progress during the first two decades.

NOVEMBER.—Rather disagreeable weather prevailed during the first two decades, the temperature averaging below the normal, accompanied by occasional high winds and snow. As a result, much yard feeding of livestock was required, and auto travel was greatly impeded. The last decade was fair with mild temperature, which resulted in a rapid diminution in snow covering, and allowed livestock to range freely on pastures and harvested fields.

DECEMBER.—Mild temperature prevailed during the first six days, being followed by decidedly colder until the 17th when milder weather again prevailed and continued to the close of the month. The precipitation was deficient, being confined to light snows, mostly during the 3d-6th and 10th-13th. Some of these snows were accompanied by high winds which blocked roads and necessitated considerable yard feeding of livestock.

Killing Frosts

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

VOL. XLII BISMARCK, N. D., JANUARY, 1933 No. 1

GENERAL SUMMARY

The weather of the month was generally mild and pleasant, outdoor work made excellent progress, especially the harvesting of ice which was wholly completed, and livestock ranged freely on pastures and harvested fields, saving much feed. While the average precipitation was considerably above the normal, the heaviest occurred during the second decade, and, being accompanied by occasional high winds, effectively blocked highways at times.

TEMPERATURE

The mean temperature for the state was 11.8°, or 5.6° above the normal, and 2.3° higher than the mean for January, 1932. The highest mean reported was 22.8° at New England, Hettinger County; the lowest was 3.8° at Hannah, Cavalier County. The highest temperature reported was 53° at New England, Hettinger County on the 24th; the lowest was -30° at Mott, Hettinger County on the 16th. The greatest monthly range of temperature was 80° at Mott, Hettinger County; the least was 47° at Hillsboro, Traill County. The greatest daily range of temperature was 56° at Wishek, McIntosh County on the 15th.

PRECIPITATION

The average precipitation for the state was 0.80 inch, or 0.33 inch above the normal, and 0.25 inch more than the average for January, 1932. The greatest monthly amount reported was 1.79 inches at Hillsboro, Traill County; the least was 0.11 inch at Wishek, McIntosh County. The greatest amount recorded in any 24 consecutive hours was 1.00 inch at Marmarth, Slope County on the 16th. The average number of days with 0.01 inch or more of precipitation was 7. The average snowfall was 10.0 inches.

AURORAS

Auroras were observed at Eckman and Rugby on the 1st; at Pembina on the 2d; at Eckman and Towner on the 17th; at Eckman, Foxholm, Hannah and Rugby on the 19th; at Crosby, Eckman, Pembina and Towner on the 20th; at Eckman, Ellendale, Foxholm, Oakes, Parshall and Rugby on the 21st; at Eckman, Ellendale, Foxholm and Rugby on the 22d; at Crosby, Eckman, Ellendale, Foxholm, Napoleon, Parshall, Pembina, Rugby, Willow City and Moorhead on the 23d; at Crosby and Williston on the 24th; at Pembina on the 25th; at Foxholm on the 26th; and at Eckman and Dogden Butte on the 30th.

MISCELLANEOUS PHENOMENA

FOG: Ellendale, Linton, New Salem, 4th; Devils Lake, Pembina, 9th; Hansboro, 10th; Grafton, 11th; Pembina, 14th; Ellendale, 15th; Power, 18th; Moorhead, 21st; Rugby, 22d; Ellendale, 23d; Devils Lake, Linton, New Salem, Steele, 27th; Garrison, 29th; Arnegard, Corinth, Epping, Garrison, Linton, New Salem, Williston, 30th; Bismarck, Garrison, Granville, New Salem, Parshall, Rugby, Steele, Washburn, Westhope, 31st.

HALOS, lunar: Williston, 1st; Bismarck, Grand Forks, Oakes, Moorhead, 2d; Grand Forks, 4th; Williston, 8th; Oakes, 9th; Bismarck, Williston, 10th; Edmore 11th; Ellendale, Grand Forks, 12th; Bismarck, 20th; Bismarck, Ellendale, Oakes, Moorhead, 31st.

HALOS, solar: Oakes, 3d; Grand Forks, Moorhead, 7th; Devils Lake, 8th; Moorhead, 9th; Oakes, 10th; Grand Forks, Edmore, Williston, Moorhead, 11th; Moorhead, 14th; Grand Forks, 17th; Grand Forks, Moorhead, 19th; Ellendale, Dogden Butte, 23d; Ellendale, Foxholm, Moorhead, 25th; Foxholm, Moorhead, 27th; Marmarth, Williston, 28th; Rugby, 30th; Ellendale, Oakes, 31st.

SLEET: Dunseith, Linton, 6th; Epping, 10th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, a, b, c, appearing in the table indicate number of days missing; for example, b represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Dogden Butte, near Butte; Energy, Underwood; Grand Forks, University; Power, Leonard; Howard, Grenora; Stowers, Thunder Hawk, S. D.

Daily Precipitation for January, 1933

ORRIS W. ROBERTS, Meteorologist

VOL. XLII BISMARCK, N. D., FEBRUARY, 1933 No. 2

GENERAL SUMMARY

Unseasonably low temperature, accompanied by snow and occasional high winds characterized the opening of the month and prevailed through the first and part of the second decade, the storm of the 7–8th being the most severe in the history of the state. This condition was followed by generally mild and pleasant weather with only light scattered precipitation. Much yard feeding of livestock was necessitated during the fore part of the month, and highways in all sections were snow blocked.

TEMPERATURE

The mean temperature for the state was 7.9°, or 2.3° below the normal, and 5.7° lower than the mean for February, 1932. The highest mean reported was 13.0° at New England, Hettinger County, and Fort Yates, Sioux County; the lowest was 0.6° at Hannah, Cavalier County. The highest temperature reported was 58° at Fort Yates, Sioux County on the 25th; the lowest was -45° at Energy, McLean County, and Marmarth, Slope County on the 7th. The greatest monthly range of temperature was 97° at Linton, Emmons County; the least was 72° at Hansboro, Towner County. The greatest daily range of temperature was 65° at Fort Yates, Sioux County on the 5th.

PRECIPITATION

The average precipitation for the state was 0.28 inch, or 0.21 inch below the normal, and 0.07 inch less than the average for February, 1932. The greatest monthly amount reported was 1.00 inch at Sanish, Mountrail County; the least was a trace at Amenia, Cass County, and Dunn Center, Dunn County. The greatest amount recorded in any 24 consecutive hours was 0.43 inch at Cooperstown, Griggs County on the 6th. The average number of days with 0.01 inch or more of precipitation was 3. The average snowfall was 3.3 inches.

AURORAS

Auroras were observed at Foxholm and Pembina on the 2d; at Eckman on the 12th; at Eckman, Edmore and Foxholm on 14th; at Pembina on the 15th; at Moorhead on the 16th; at Eckman, Pembina, Rugby, Trotters and Williston on the 19th; at Bottineau, Devils Lake, Dogden Butte, Edmore, Foxholm, Grand Forks, Pembina, Petersburg, Rugby, Stowers and Willow City on the 20th; at Bottineau, Devils Lake, Eckman, Edmore, Grand Forks, Pembina, Petersburg, Rugby and Williston on the 21st; at Foxholm and Pembina on the 22d; at Pembina on the 23d; at Crosby, Eckman and Foxholm on the 24th; at Crosby, Devils Lake, Eckman, Edmore, Fessenden, Foxholm, Grand Forks, Oakes, Pembina, Petersburg, Rugby, Sharon and Willow City on the 25th; at Carson, Dogden Butte and Oakes on the 26th; and at Eckman on the 27th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Dogden Butte, near Butte; Energy, Underwood; Grand Forks, University; Power, Leonard; Howard, Grenora; Stowers, Thunder Hawk, S. D.

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

Vol. XLII Bismarck, N. D., March, 1933 No. 3

GENERAL SUMMARY

While mild and pleasant weather prevailed throughout the state during the greater part of the month, soil conditions were such that practically no spring work on farms could be accomplished until the last few days in the month, due to frozen ground and occasional snow banks. The precipitation, while below the normal, was practically all absorbed by the soil, and surface moisture conditions were excellent generally. Winter rye came through as a rule in good condition.

TEMPERATURE

The mean temperature for the state was 28.5°, or 4.4° above the normal, and 9.6° higher than the mean for March, 1932. The highest mean reported was 33.0° at Carson, Grant County; the lowest was 20.2° at Pembina, Pembina County. The highest temperature reported was 70° at Berthold Agency, McLean County on the 28th, at Fort Yates, Sioux County on the 30th, and at Sanish, Mercer County on the 29th; the lowest was -14° at Bottineau, Bottineau County, Dunseith, Rolette County, and Hannah, Cavalier County on the 9th. The greatest monthly range of temperature was 78° at Howard, Williams County; the least was 55° at Hillsboro, Traill County. The greatest daily range of temperature was 57° at Cando, Towner County on the 5th.

PRECIPITATION

The average precipitation for the state was 0.45 inch, or 0.25 inch below the normal, and 0.18 inch less than the average for March, 1932. The greatest monthly amount reported was 1.85 inches at Hankinson, Richland County; the least was a trace at Berthold Agency, McLean County. The greatest amount recorded in any 24 consecutive hours was 1.50 inches at Hankinson, Richland County on the 29th. The average number of days with 0.01 inch or more of precipitation was 3. The average snowfall was 3.7 inches.

MISCELLANEOUS PHENOMENA

Auroras: Arnegard, Drake, Velva, 20th; Bottineau, 19th, 27th, 30th; Devils Lake, 13th, 17th, 20th; Dogden Butte, Epping, 28th; Eckman, 13th, 17th, 18th, 19th, 20th, 22d, 25th, 27th, 30th; Edmore, Moorhead, 19th, 21st; Ellendale, 21st; Fessenden, 3d; Foxholm, 13th, 18th, 19th, 20th, 22d, 23d, 26th, 27th; Grand Forks, 10th, 17th, 18th, 19th, 20th, 21st, 22d, 23d; Hannah, 20th, 21st; Hansboro, 21st, 22d; Howard, 25th, 27th, 30th; Napoleon, Trotters, 18th, 21st; Oakes, 19th, 20th, 21st, 27th; Pembina, 2d, 14th, 17th, 18th, 19th, 20th, 21st, 22d, 23d, 26th, 27th; Petersburg, 18th, 19th, 21st, 23d; Pettibone, 16th, 19th, 20th, 21st, 22d, 28th; Rugby, 18th, 19th, 20th, 22d, 27th; Sharon, 19th, 20th, 21st; Stowers, 19th, 20th; Towner, 17th, 19th, 20th, 21st, 22d, 24th, 28th; Willow City, 18th, 19th, 20th, 21st, 30th.

Fog: Bismarck, 6th, 12th, 25th, 29th; Devils Lake, 2d, 29th, 31st; Eckman, Sharon, Steele, 29th; Ellendale, 7th, 12th, 26th; Epping, Howard, Linton, New Salem, Trotters, Williston, 25th; Grand Forks, 2d, 3d, 13th, 29th, 30th; Hannah, 13th, 29th; Hansboro, 12th; Kenmare, 2d; Moorhead, 30th; Petersburg 7th.

Halos, lunar: Devils Lake, 3d, 4th; Dogden Butte, 15th; Epping, 6th; Grand Forks, 8th, 9th, 12th; Linton, 12th; Moorhead, 2d, 10th; Towner, 5th.

Halos, solar: Bismarck, Epping, Williston, 8th; Devils Lake, 2d, 12th, 13th, 18th, 23d, 28th; Dogden Butte, 18th, 23d, 28th; Ellendale, 11th, 18th, 19th, 22d, 23d; Foxholm, 8th, 12th, 14th; Grand Forks, 9th, 11th; Linton, 9th; Moorhead, 4th, 11th, 12th, 17th, 18th, 19th, 20th, 23d, 29th, 30th; Oakes, 18th; Rugby, 2d, 18th, 24th; Towner, 7th.

Sleet: Devils Lake, Portal, Valley City, Williston, 7th; McLeod, 24th; Mandan, 3d, 4th; New England, 17th; Velva, 4th.

Thunerstorms: Hankinson, Linton, Oakes, Pembina, Petersburg, Pettibone, Sharon, Moorhead, 29th; McLeod, 29th, 30th; Napoleon, 7th, 29th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Dogden Butte, near Butte; Energy, Underwood; Grand Forks, University; Power, Leonard; Howard, Grenora; Stowers, Thunder Hawk, S. D.

Daily Precipitation for March, 1933

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

VOL. XLII BISMARCK, N. D., APRIL, 1933 No. 4

GENERAL SUMMARY

Temperature conditions were somewhat changeable in all sections, the second decade being the warmest. Occasional frosts and freezing temperature were reported, but due to the backward condition of vegetation little damage resulted. Spring work on farms generally made good progress, though interrupted by showers on the 4th–5th, 9th–10th, 19th–20th, and 29th–30th. Early planted grains were up to good stand and color, and winter rye came through satisfactorily. Pastures and ranges improved rapidly and afforded ample feed for livestock.

TEMPERATURE

The mean temperature for the state was 40.0°, or 1.6° below the normal, and 4.1° lower than the mean for April, 1932. The highest mean reported was 44.3° at Wahpeton, Richland County; the lowest was 36.0° at Bottineau, Bottineau County. The highest temperature reported was 84° at McLeod, Ransom County on the 18th; the lowest was 2° at Willow City, Bottineau County on the 11th. The greatest monthly range of temperature was 73° at Parshall, Mountrail County; the least was 53° at Powers Lake, Burke County. The greatest daily range of temperature was 56° at Fort Yates, Sioux County on the 22d.

PRECIPITATION

The average precipitation for the state was 1.33 inches, or 0.06 inch below the normal, and 0.83 inch less than the average for April, 1932. The greatest monthly amount reported was 2.90 inches at Power, Richland County; the least was 0.13 inch at Maddock, Benson County. The greatest amount recorded in any 24 consecutive hours was 2.00 inches at Minot, Ward County on the 20th. The average number of days with 0.01 inch or more of precipitation was 5. The average snowfall was 7.3 inches.

MISCELLANEOUS PHENOMENA

AURORAS: Bismarck, 22d; Carson 15th; Crosby, 22d, 25th; Devils Lake, 15th, 16th, 20th, 22d; Dogden Butte, 16th, 17th, 23d; Drake, 20th, 22d; Eckman, 1st, 16th, 20th, 22d, 25th; Edmore, 21st; Fessenden, 22d, 26th; Foxholm, 1st, 2d, 14th, 16th, 20th, 21st, 22d, 23d, 26th; Grand Forks, 16th, 17th, 18th, 21st; Howard, 17th, 21st; Hannah 27th; Mohall, 30th; New England, Pettibone, 16th; Oakes, 15th, 16th; Parshall, 21st, 23d; Pembina, 7th, 15th, 16th, 19th, 20th, 22d, 23d; Petersburg, 15th, 27th; Rugby, 2d, 14th, 22d; Trotters, 14th; Willow City, 20th, 26th.

FOG: Garrison, 4th; Grand Forks, 7th; Howard, 5th, 18th; Moorhead, 9th; New England, 29th.

HALOS, lunar: Bismarck, 1st; Grand Forks, 3d; Oakes, 11th; Sharon 7th.

HALOS, solar: Ellendale, 2d, 3d; Grand Forks, 11th, 14th, 15th, 29th; Moorhead, 11th, 15th, 20th, 24th; Oakes, 7th; Petersburg, 15th; Rugby, 14th, 24th, 26th; Williston, 26th.

SLEET: Devils Lake, 1st, 2d, 9th, 10th; Eckman, 19th; Grand Forks, 1st; Pettibone, Towner, Velva, 2d; Trotters, 20th.

THUNDERSTORMS: Bowman, Ellendale, Fullerton, Oakes, 29th; Dogden Butte, Rugby, Velva, 19th; Foxholm, 19th, 20th; Marmarth, 20th, 27th; Power, 23d.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T Precipitation is less than 0.01 inch rain or melted snow.

††Post-office addresses of these stations are: Berthold Agency, Elbowoods; Dogden Butte, near Butte; Energy, Underwood; Grand Forks, University; Power, Leonard; Howard, Grenora; Stowers, Thunder Hawk, S. D.

Daily Precipitation for April, 1933

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

Vol. XLII BISMARCK, N. D., MAY, 1933 No. 5

GENERAL SUMMARY

The temperature for the state averaged above normal and only a few scattered stations reported readings below freezing after the 12th. Precipitation also averaged somewhat above normal. In the north-central and western parts of the state precipitation was more than an inch above normal generally, but it was below normal in the southeastern, south-central and extreme northeastern counties. General, beneficial showers occurred on the 8-9th and 22d-24th. Crops were somewhat backward at the beginning of the month, but at the close both crops and soil moisture conditions were mostly very good. A tornado occurred near New Leipzig, Grant County on the 22d. Four persons were killed, eight others were injured and widespread property damage was reported. F.J.B.

TEMPERATURE

The mean temperature for the state was 54.8°, or 2.0° above the normal, and 1.1° lower than the mean for May, 1932. The highest mean reported was 58.2° at Wahpeton, Richland County; the lowest was 51.6° at Bowman, Bowman County. The highest temperature reported was 98° at Max, McLean County on the 31st; the lowest was 19° at Dunseith, Rolette County on the 3d and 10th. The greatest monthly range of temperature was 70° at Berthold Agency, McLean County; the least was 48° at Mott, Hettinger County. The greatest daily range of temperature was 53° at Fort Yates, Sioux County on the 29th.

PRECIPITATION

The average precipitation for the state was 3.15 inches, or 0.75 inch above the normal, and 1.01 inches more than the average for May, 1932. The greatest monthly amount reported was 5.41 inches at Mohall, Renville County; the least was 1.43 inches at Edmore, Ramsey County. The greatest amount recorded in any 24 consecutive hours was 2.90 inches at Beach, Golden Valley County on the 23d. The average number of days with 0.01 inch or more of precipitation was 9. The average snowfall was a trace.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ᵃ, ᵇ, ᶜ, appearing in the table indicate number of days missing; for example, ᵇ represents two days, etc.

†Also on other dates. ‡‡Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Dogden Butte, near Butte; Energy, Underwood; Grand Forks, University; Power, Leonard; Howard, Grenora; Stowers, Thunder Hawk, S. D.

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

VOL. XLII BISMARCK, N. D., JUNE, 1933 No. 6

GENERAL SUMMARY

Decidedly unfavorable weather conditions prevailed throughout North Dakota during June. The mean temperature was by far the highest of record for that month, and the average precipitation was but slightly more than one-half of the normal. As a result of the combined drought and high temperatures crops deteriorated in all sections, and particularly in the southeast portion where there was a shortage of moisture during 1932. Small grains generally headed short, while in some sections fields were abandoned, being used for pasture or summer fallowed. Ranges and pastures were short, with greatly decreased hay crop. Corn and potatoes, however, were generally good to excellent in nearly all sections.

TEMPERATURE

The mean temperature for the state was 70.7°, or 8.2° above the normal, and 3.7° higher than the mean for June, 1932. The highest mean reported was 76.0° at Fort Yates, Sioux County; the lowest was 65.6° at Howard, Williams County. The highest temperature reported was 110° at Fort Yates, Sioux County on the 18th; the lowest was 33° at Eckman, Bottineau County on the 12th. The greatest monthly range of temperature was 71° at Edgeley, LaMoure County; the least was 53° at Williston, Williams County. The greatest daily range of temperature was 52° at Fort Yates, Sioux County on the 16th.

PRECIPITATION

The average precipitation for the state was 1.75 inches, or 1.70 inches below the normal, and 2.08 inches less than the average for JUNE, 1932. The greatest monthly amount reported was 4.49 inches at Valley City, Barnes County; the least was 0.38 inch at Hettinger, Adams County. The greatest amount recorded in any 24 consecutive hours was 2.92 inches at Valley City, Barnes County on the 29th. The average number of days with 0.01 inch or more of precipitation was 7.

MISCELLANEOUS PHENOMENA

AURORAS: Bismarck, 19th, 20th, 27th; Bottineau, Drake, Hettinger, Howard, 19th; Devils Lake, 19th, 20th; Dogden Butte, 28th; Eckman, 12th, 15th, 18th, 23d, 25th, 26th, 29th; Foxholm, 1st; Grand Forks, 12th, 20th, 23d, 27th; Oakes, 12th; Pembina, 19th, 20th, 26th; Petersburg, 12th; Pettibone, 13th, 21st; Sharon, 27th.

FOG: Dogden Butte, 24th; Rugby, 8th.

HALOS, solar: Bismarck, 23d, 26th; Devils Lake, Dogden Butte, 5th; Moorhead, 11th, 23d.

HAIL: Ashley, Gackle, 7th; Bismarck, 19th; Devils Lake, Drake, Edmore, Foxholm, 5th; Dogden Butte, 28th; Grand Forks, 25th; Linton, 22d; McLeod, Sharon, 6th; Pembina, 1st; Moorhead, Pettibone, 4th; Stowers, 3d; Towner, 27th.

THUNDERSTORMS: On the 1st, 2d, 3d, 4th, 5th, 6th, 7th, 8th, 9th, 10th, 11th, 17th, 18th, 19th, 20th, 22d, 23d, 24th, 25th, 26th, 27th, 28th, 29th, 30th, with the greatest number reported on the 3d, 5th, 22d, 25th, 26th, and 28th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Dogden Butte, near Butte; Energy, Underwood; Grand Forks, University; Power, Leonard; Howard, Grenora; Stowers, Thunder Hawk, S. D.

Daily Precipitation for June, 1933

O. W. ROBERTS

VOL. XLII   BISMARCK, N. D., JULY, 1933   No. 7

GENERAL SUMMARY

Moderate scattered showers occurred during the opening days of the month, which slightly improved conditions in a few sections, but as a rule small grains deteriorated generally; winter rye and early planted small grains headed short, considerable being cut for hay or used for pasturage. Showers again on the 9th relieved conditions somewhat, but except for light scattered showers on the 22d and 24th all crops, including corn, continued to deteriorate. Rye harvest was completed and threshing of this crop was well advanced during the month with disappointing yields. Harvest of small grains made good headway and some threshing of early planted spring wheat, barley and oats was done. Pastures, ranges and meadows were short in nearly all sections and livestock deteriorated somewhat.

TEMPERATURE

The mean temperature for the state was 71.9°, or 3.5° above the normal, and 1.9° higher than the mean for July, 1932. The highest mean reported was 78.0° at New England, Hettinger County; the lowest was 68.4° at Hansboro, Towner County. The highest temperature reported was 109° at Bottineau, Bottineau County on the 28th; the lowest was 36° at Powers Lake, Burke County on the 31st. The greatest monthly range of temperature was 69° at Berthold Agency, McLean County; the least was 46° at Pembina, Pembina County. The greatest daily range of temperature was 53° at Garrison, McLean County on the 24th.

PRECIPITATION

The average precipitation for the state was 2.00 inches, or 0.42 inch below the normal, and 0.01 inch less than the average for July, 1932. The greatest monthly amount reported was 4.95 inches at Parshall, Mountrail County; the least was 0.39 inch at Alpha, Golden Valley County. The greatest amount recorded in any 24 consecutive hours was 2.38 inches at Parshall, Mountrail County on the 6th. The average number of days with 0.01 inch or more of precipitation was 7.

MISCELLANEOUS PHENOMENA

AURORAS: Carson, Devils Lake, Edmore, Grand Forks, 23d; Dogden Butte, Parshall, 24th; Eckman, 1st, 2d, 13th, 16th, 18th, 20th, 22d, 23d, 31st; Foxholm, 14th, 18th; Hannah, Tagus, Trotters, 26th; Pembina, 23d, 24th; Petersburg, 17th, 20th, 23d; Sharon, 17th; Velva, 9th, 23d, 25th, 26th.

FOG: Bismarck, 2d, 23d; Bowman, Garrison, Minot, Mohall, 7th; Devils Lake, Edmore, 30th; Grand Forks, 8th, 10th; Pembina, 10th; Rugby, 26th.

HALOS, solar: Devils Lake, 1st; Petersburg, 17th; Moorhead, 1st, 19th.

HAIL: Beach, Bismarck, 22d; Berthold Agency, 10th; Dickinson, 4th; Eckman, Foxholm, Westhope, 17th; Ellendale, 12th; Sharon, Washburn, 11th; Williston, 3d; Willow City, 18th.

THUNDERSTORMS: On all days except the 14th, 15th, 16th, 21st, 24th, and 31st; with the greatest number reported on the 4th, 6th, 9th, 10th, 12th, 18th, 20th, 22d, and 30th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ᵃ, ᵇ, ᶜ, appearing in the table indicate number of days missing; for example, ᵇ represents two days, etc.

†Also on other dates. ‡‡Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Dogden Butte, near Butte; Energy, Underwood; Grand Forks, University; Power, Leonard; Howard, Grenora; Stowers, Thunder Hawk, S. D.

Daily Precipitation for July, 1933

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

O. W. ROBERTS

Vol. XLII Bismarck, N. D., August, 1933 No. 8

GENERAL SUMMARY

The weather of the month was favorable for harvesting and threshing and excellent progress was made, though with generally disappointing yields. Due to unseasonably high temperatures and to lack of precipitation corn, potatoes, late flax, pastures and ranges deteriorated considerably. Due to lack of soil moisture little fall plowing or seeding of winter rye was accomplished. With the exception of the period, 22–24th, when moderate showers occurred, the precipitation of the month was confined to widely scattered light showers.

TEMPERATURE

The mean temperature for the state was 68.5°, or 2.3° above the normal, and 0.2° higher than the mean for August, 1932. The highest mean reported was 71.0° at Wahpeton, Richland County; the lowest was 65.8° at Wishek, McIntosh County. The highest temperature reported was 104° at Carrington, Foster County on the 20th; the lowest was 31° at Edmore, Ramsey County on the 28th. The greatest monthly range of temperature was 67° at Carrington, Foster County; the least was 49° at Richardton, Stark County. The greatest daily range of temperature was 60° at Epping, Williams County on the 7th.

PRECIPITATION

The average precipitation for the state was 0.73 inch, or 1.31 inches below the normal, and 1.09 inches less than the average for August, 1932. The greatest monthly amount reported was 2.37 inches at Hankinson, Richland County; the least was 0.06 inch at Gackle, Logan County. The greatest amount recorded in any 24 consecutive hours was 1.61 inches at Hankinson, Richland County on the 22d. The average number of days with 0.01 inch or more of precipitation was 5.

MISCELLANEOUS PHENOMENA

Auroras: Bismarck, 13th, 24th; Carson, 29th; Crosby, 17th; Devils Lake, Minot, 16th; Edmore, Velva, 13th; Fessenden, 21st, 27th; Foxholm, 13th, 14th, 16th, 18th; Pembina, 12th, 13th, 18th, 19th, 20th; Rugby, 4th, 13th.

Fog: Bismarck, Moorhead, 23d; Bottineau, 31st; Dogden Butte, 6th; Edmore, Gackle, Sharon, 21st.

Halos, lunar: Petersburg, 11th.

Halos, solar: Devils Lake, 25th; Edmore, Foxholm, 8th; Moorhead, 1st, 3d, 22d; Rugby, 18th; Williston, 19th.

Hail: Edmore, 28th; Howard, 31st; Westhope, 24th.

Thunderstorms: On the 5th, 6th, 7th, 8th, 9th, 11th, 15th, 16th, 20th, 21st, 22d, 23d, 24th, and 31st; with the greatest number reported on the 6th, 8th, 9th, 15th, 16th, and 22d.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ᵃ, ᵇ, ᶜ, appearing in the table indicate number of days missing; for example, ᵇ represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Dogden Butte, near Butte; Energy, Underwood; Grand Forks, University; Power, Leonard; Howard, Grenora; Stowers, Thunder Hawk, S. D.

CHARLES F. MARVIN, Chief

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

O. W. ROBERTS

VOL. XLII BISMARCK, N. D., SEPTEMBER, 1933 No. 9

GENERAL SUMMARY

The weather during the month was characterized by unseasonably high temperature and extreme dryness, the average temperature being the fourth highest, and the average precipitation being the seventh lowest of record in the climatological history of the State, covering a period of forty-two years. As a result of these conditions, excellent progress was made in late harvesting and threshing, though the yields were disappointing. Fall plowing and the seeding of winter rye, due to dry soil, made slow progress. At the close of the month rain was needed in all sections for pastures and ranges.

TEMPERATURE

The mean temperature for the State was 60.9°, or 4.5° above the normal, and 4.1° higher than the mean for September 1932. The highest mean reported was 66.0° at Wahpeton, Richland County; the lowest was 56.6° at Portal, Burke County. The highest temperature reported was 101° at Fort Yates, Sioux County and New England, Hettinger County on the 18th; the lowest was 22° at Willow City, Bottineau County on the 26th. The greatest monthly range of temperature was 77° at Sanish, Mountrail County; the least was 50° at Pembina, Pembina County. The greatest daily range of temperature was 62° at Sanish, Mountrail County on the 3d.

PRECIPITATION

The average precipitation for the State was 0.79 inch, or 0.86 inch below the normal, and 0.15 inches more than the average for September 1932. The greatest monthly amount reported was 2.71 inches at Hillsboro, Traill County; the least was 0.20 inch at Ellendale, Dickey County, and Energy, McLean County. The greatest amount recorded in any 24 consecutive hours was 1.40 inches at Hillsboro, Traill County on the 25th. The average number of days with 0.01 inch or more of precipitation was 4.

MISCELLANEOUS PHENOMENA

AURORAS: Arnegard, Moorhead, New England, Stanton, 17th; Bismarck, 11th, 14th, 16th, 17th; Bottineau, Minot, 11th, 16th, 17th; Carson, Stowers, 16th, 17th; Crosby, 3d; Devils Lake, 8th, 14th, 16th, 19th, 26th; Dogden Butte, 12th; Drake, 11th, 17th; Eckman, 9th; Edmore, 8th, 9th, 11th, 14th, 17th, 19th; Fessenden, 9th, 10th, 11th, 17th, 19th; Fort Yates, 22d; Foxholm, 11th, 13th, 14th, 16th, 17th, 19th, 20th, 21st, 25th, 26th; Grand Forks, 17th, 27th, 28th; Hannah, 8th, 9th, 16th; Howard, 11th, 14th, 16th, 18th, 19th, 20th; Napoleon, Oakes, Sharon, 8th, 17th; Parshall, 12th, 18th; Pembina, 9th, 12th, 14th, 24th; Petersburg, 9th, 11th, 14th, 17th, 20th; Pettibone, 19th; Rugby, 16th; Tagus, 11th, 14th, 17th; Trotters, 11th, 13th, 14th, 16th, 17th; Velva, 17th, 20th; Williston, 11th, 14th, 16th, 17th, 19th, 23d; Willow City, 11th, 16th.

FOG: Bismarck, 3d, 10th, 11th, 13th; Bottineau, Fullerton, Marmarth, Trotters, Williston, 11th; Devils Lake, Sharon, 5th, 14th; Ellendale, 13th; Foxholm, Stanton, 6th; Garrison, 10th, 11th, 13th; Grand Forks, 13th, 14th; Granville, 11th, 12th; Howard, 8th, 12th, 24th; Minot, New Salem, Parshall, 11th, 13th; Moorhead, 6th, 11th, ; Petersburg, 5th; Pettibone, 11th, 12th, 13th, 14th.

HALOS, solar: Moorhead, 12th; Williston, 27th, 28th.

HAIL: Pembina, 7th; Pettibone, 25th.

THUNDERSTORMS: Bismarck, 18th, 21st, 25th; Devils Lake, Edmore, 18th; Eckman, Hankinson, 15th; Grand Forks, 12th, 15th; Hannah, 7th, 18th; McLeod, 2d, 6th, 7th, 16th, 19th; Moorhead, 4th, 5th, 7th, 8th, 15th, 25th; Oakes, 7th, 15th; Pembina, 7th, 18th, 25th; Pettibone, 19th, 25th; Willow City, 7th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, a, b, c, appearing in the table indicate number of days missing; for example, b represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Dogden Butte, near Butte; Energy, Underwood; Grand Forks, University; Power, Leonard; Howard, Grenora; Stowers, Thunder Hawk, S. D.

Daily Precipitation for September, 1933

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

O. W. ROBERTS

Vol. XLII	Bismarck, N. D., October 1933	No. 10

GENERAL SUMMARY

Variable temperatures with only light precipitation characterized the opening of the month, a condition that obtained until the 15th. During the latter part of the month the weather was generally cold and cloudy and during the period practically all of the precipitation occurred. Frosts and freezing temperatures early in the month damaged late garden truck. Due to the dryness of the soil from continued drought, pastures, ranges, meadows, and harvested fields yielded less than the usual feed for livestock and considerable yard feeding was necessary.

TEMPERATURE

The mean temperature for the State was 41.5°, or 2.0° below the normal, and 3.2° higher than the mean for October 1932. The highest mean reported was 47.2° at New England, Hettinger County; the lowest was 35.6° at Portal, Burke County. The highest temperature reported was 88° at Oakes, Dickey County on the 14th; the lowest was 5° at Edmore, Ramsey County on the 25th, and at Hansboro, Towner County on the 28th. The greatest monthly range of temperature was 74° at Oakes, Dickey County; the least was 57° at Mott, Hettinger County. The greatest daily range of temperature was 67° at Powers Lake, Burke County on the 11th.

PRECIPITATION

The average precipitation for the State was 0.53 inch, or 0.51 inch below the normal, and 1.78 inches less than the average for October 1932. The greatest monthly amount reported was 1.33 inches at Grand Forks, Grand Forks County; there was none at Hankinson, Richland County. The greatest amount recorded in any 24 consecutive hours was 0.89 inch at McClusky, Sheridan County on the 19th. The average number of days with 0.01 inch or more of precipitation was 4. The average snowfall was 1.7 inches.

MISCELLANEOUS PHENOMENA

Auroras: Arnegard, 5th; Bismarck, Crosby, Tagus, Willow City, 17th; Dogden Butte, Sharon, 18th; Eckman, 6th, 7th, 8th, 12th, 25th; Fessenden, 18th, 21st; Foxholm, 6th, 7th, 8th, 11th, 17th; Gackle, 6th; Grand Forks, 7th; Howard, 5th, 9th; Oakes, 8th; Parshall, 12th; Williston, 17th, 18th.

Fog: Devils Lake, 8th, 29th; Dogden Butte, Foxholm, Howard, Kenmare, Parshall, Pembina, Petersburg, 29th; Pettibone, Willow City, 10th; Valley City, 31st.

Hail: Marmarth, 15th.

Halos, lunar: Bismarck, 12th; Devils Lake, Edmore, 2d; Foxholm, 2d, 30th; Grand Forks, Petersburg, 27th; Moorhead, 31st; Williston, 12th, 30th.

Halos, solar: Devils Lake, 10th, 18th, 27th; Dogden Butte, 18th, 19th; Edmore, 30th, 31st; Foxholm, 9th; Moorhead, 1st, 20th; Oakes, 16th; Petersburg, 27th.

Sleet: Ashley, Devils Lake, Edmore, Grand Forks, Larimore, Mayville, Sharon, Velva, 28th; Bismarck, 23; Garrison, Linton, Marmarth, Mary, Parshall, Williston, 27th; Howard, 27th, 31st; Mohall, 31st; New England, 26th.

Thunderstorms: Marmarth, 15th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, a, b, c, appearing in the table indicate number of days missing; for example, b represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Dogden Butte, near Butte; Energy, Underwood; Grand Forks, University; Power, Leonard; Howard, Grenora; Stowers, Thunder Hawk, S. D.

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

O. W. ROBERTS

VOL. XLII   BISMARCK, N. D., NOVEMBER 1933   No. 11

GENERAL SUMMARY

Mild temperature and fair weather marked the opening of the month, but was immediately followed by lower temperature and general snows, which condition prevailed until the 12th, when clearing and warmer weather obtained. The latter part of the month was generally mild, allowing livestock to range freely in most sections, but considerable yard feeding in the eastern portion was necessary. A stormy period extended from the 21st to the 25th, but the precipitation was generally light.

TEMPERATURE

The mean temperature for the State was 28.3°, or 0.9° above the normal, and 3.1° higher than the mean for November 1932. The highest mean reported was 35.0° at Marmarth, Slope County; the lowest was 19.5° at Pembina, Pembina County. The highest temperature reported was 78° at Wahpeton, Richland County on the 1st; the lowest was -15° at Pembina, Pembina County on the 16th. The greatest monthly range of temperature was 82° at Wahpeton, Richland County; the least was 46° at Hannah, Cavalier County and Dogden Butte, McLean County. The greatest daily range of temperature was 52° at Ashley, McIntosh County on the 19th.

PRECIPITATION

The average precipitation for the State was 0.65 inch, or 0.04 inch above the normal, and 0.16 inch more than the average for November 1932. The greatest monthly amount reported was 1.51 inches at Jamestown, Stutsman County; the least was a trace at Mohall, Renville County. The greatest amount recorded in any 24 consecutive hours was 1.22 inches at Richarton, Stark County on the 4th. The average number of days with 0.01 inch or more of precipitation was 5. The average snowfall was 6.6 inches.

MISCELLANEOUS PHENOMENA

AURORAS: Arnegard, Carson, Stowers, Williston, 10th; Eckman, 5th, 16th; Foxholm, 16th, 19th; Howard, 14th; Moorhead, 30th; Pembina, 19th; Petersburg, 15th, 17th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ᵃ, ᵇ, ᶜ, appearing in the table indicate number of days missing; for example, ᵇ represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Dogden Butte, near Butte; Energy, Underwood; Grand Forks, University; Power, Leonard; Howard, Grenora; Stowers, Thunder Hawk, S. D.

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

O. W. ROBERTS

VOL. XLII BISMARCK, N. D., DECEMBER 1933 No. 12

GENERAL SUMMARY

From the standpoint of comfort to both humans and livestock the weather of the month was decidedly unfavorable, the temperature being below the normal and the snowfall being above the average. The month opened with rather mild temperature and during that period practically all of the highest temperatures were recorded. Scattered precipitation occurred throughout the month, being general from the 9th to the 15th, inclusive, and on the 23d. Much yard feeding of livestock was necessary.

TEMPERATURE

The mean temperature for the State was 8.6°, or 4.0° below the normal, and 3.8° lower than the mean for December 1932. The highest mean reported was 18.8° at Marmarth, Slope County; the lowest was −0.6° at Hannah, Cavalier County. The highest temperature reported was 62° at New England, Hettinger County on the 2d; the lowest was −38° at Langdon, Cavalier County on the 28th and 29th. The greatest monthly range of temperature was 92° at Towner, McHenry County; the least was 69° at Fullerton, Dickey County. The greatest daily range of temperature was 61° at Langdon, Cavalier County on the 9th.

PRECIPITATION

The average precipitation for the State was 0.88 inch, or 0.36 inch above the normal, and 0.70 inch more than the average for December 1932. The greatest monthly amount reported was 2.35 inches at Howard, Williams County; there was none at Wishek, McIntosh County. The greatest amount recorded in any 24 consecutive hours was 1.00 inch at Tioga, Williams County on the 7th. The average number of days with 0.01 inch or more of precipitation was 6. The average snowfall was 9.7 inches.

MISCELLANEOUS PHENOMENA

AURORAS: Moorhead, 16th.

FOG: Beach, 4th; Bismarck, 14th, 29th, 30th; Bowman, 22d; Carrington, 20th; Carson, Steele, 16th; Crosby, Eckman, 9th; Dickinson, 14th, 16th; Dogden Butte, Fort Yates, 14th; Edmore, 10th; Ellendale, 2d, 29th; Fullerton, Oakes, 2d; Grand Forks, 2d, 3d, 4th, 5th; Linton, 11th, 14th, 16th; Moorhead, 3d, 20th; New England, 9th, 16th, 30th; Pembina, 2d, 3d; Pettibone, 3d.

HALOS, lunar: Bismarck, 2d, 24th; Devils Lake, 10th; Ellendale, 31st; Grand Forks, 26th, 29th; Moorhead, 6th; Oakes, 26th, 31st.

HALOS, solar: Bismarck, 24th; Ellendale, 10th, 31st; Grand Forks, Petersburg, 10th; Moorhead, 7th, 16th, 24th; Williston, 3d, 20th.

SLEET: Arnegard, Carrington, 30th; Bismarck, Steele, 14th; Devils Lake, McClusky, 14th, 30th; Edgeley, 15th; Larimore, Parshall, 31st; New England, 22d; Pettibone, 10th, 14th; Stanton, 15th, 30th; Velva, 14th, 15th.

THUNDERSTORMS: Bowman, 22d; Marmarth 23d.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, a, b, c, appearing in the table indicate number of days missing; for example, b represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Dogden Butte, near Butte; **Energy**, Underwood; Grand Forks, **University**; **Power**, **Leonard**; Howard, Grenora; Stowers, Thunder Hawk, S. D.

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

O. W. ROBERTS

Vol. XLII BISMARCK, N. D., ANNUAL 1933 No. 13

GENERAL SUMMARY

The year 1933 was the fifth successive year with precipitation below the normal, a record for persistent dry weather. It was also the third driest year in the climatological history of the State, and some stations reported the least annual precipitation of record at their respective localities. May was the only month during the crop season with precipitation above the normal. The precipitation was especially deficient in the Red River valley. As a result of the five years of deficient rainfall, ground water levels are the lowest of record. The snowfall for the year, however, was 12 inches above the 42-year average.

The average annual temperature for the State was 41.1°, or 1.8° above the normal, making the fourth successive year with the temperature above normal. The highest average annual temperature reported was 45.4° at New England, Hettinger County; the lowest was 36.5° at Pembina, Pembina County. The highest temperature reported was 110° at Fort Yates, Sioux County, on June 18th; the lowest was -45° at Energy, McLean County, and Marmarth, Slope County, on February 7th.

The average annual precipitation for the State was 13.34 inches, or 3.84 inch below the normal, and was the third driest year of record. The greatest annual precipitation reported was 19.36 inches at Hillsboro, Traill County; the least was 7.10 inches at Stowers, Adams County. The greatest monthly amount reported was 5.41 inches at Mohall, Renville County, in May; there was none reported at Hankinson, Richland County, in October, and at Wishek, McIntosh County, in December. The average snowfall for the State was 42.3 inches.

The average number of days with 0.01 inch or more of precipitation was 65.

There were 161 clear days, 104 partly cloudy days and 100 cloudy days.

The prevailing wind was northwest.

THE WEATHER BY MONTHS

JANUARY.—The weather of the month was generally mild and pleasant, outdoor work made excellent progress and livestock ranged freely on pastures and harvested fields, saving much feed. While the average precipitation was above the normal, the heaviest occurred during the second decade, and, being accompanied by occasional high winds, effectively blocked highways at times.

FEBRUARY.—Low temperature, accompanied by snow and occasional high winds prevailed throughout the first part of the second decade, the storm of the 7-8th being the most severe in the history of the State. This condition was followed by generally mild and pleasant weather with only light scattered precipitation. Much yard feeding of livestock was necessitated during the fore part of the month, and highways in all sections were snow blocked.

MARCH.—While mild, pleasant weather prevailed throughout the State during the greater part of the month, soil conditions were such that practically no spring work on farms could be accomplished until the last few days, due to frozen ground. The precipitation, while below normal, was practically all absorbed by the soil, and surface moisture conditions were excellent generally. Winter rye came through as a rule in good condition.

APRIL.—Temperature conditions were somewhat changeable in all sections. Occasional frosts and freezing temperature were reported, but due to the backward condition of vegetation little damage resulted. Spring work on farms generally made good progress, and early planted grains were up to good stand and color. Pastures and ranges improved rapidly and afforded ample feed for livestock.

MAY.—The temperature averaged above normal and only a few scattered stations reported readings below freezing after the 12th. Precipitation also averaged somewhat above normal. General, beneficial showers occurred on the 8-9th and 22d-24th. Crops were somewhat backward at the beginning of the month, but at the close both crops and soil mosture conditions were mostly good.

JUNE.—Unfavorable weather conditions prevailed throughout North Dakota. The mean temperature was the highest of record for June and the average precipitation was but slightly more than one-half of the normal. As a result of the combined drought and high temperatures crops deteriorated in all sections. Small grains generally, headed short, while in some sections fields were abandoned, being used for pasture or summer fallowed. Ranges and pastures were short.

JULY.—Scattered showers occurred during the opening days of the month, which slightly improved conditions in a few sections, but as a rule small grains deteriorated generally; winter rye and early planted small grains headed short, considerable being cut for hay or used for pasturage. Rye harvest was completed and threshing of this crop was well advanced during the month with disappointing yields. Pastures, ranges, and meadows were short in nearly all sections and livestock deteriorated somewhat.

AUGUST.—The weather of the month was favorable for harvesting and threshing and excellent progress was made, though with generally disappointing yields. Due to unseasonably high temperatures and to lack of precipitation corn, potatoes, late

[Continued on page 53]

The mean departures from normal temperatures are based on records from stations that have ten or more years of observations. [a], 1 day missing, [b], 2 days missing, etc.

[Continued from page 49]

flax, pastures, and ranges deteriorated considerably. Little fall plowing was accomplished due to lack of soil moisture.

September.—The weather during the month was characterized by unseasonably high temperature and extreme dryness. As a result of these conditions, excellent progress was made in late harvesting and threshing, though the yields were disappointing. Fall plowing and the seeding of winter rye, due to dry soil, made slow progress.

October.—Moderate temperature and mostly fair weather prevailed during the first half of the month, but cloudy skies, light precipitation, and colder weather prevailed during the latter part. Frosts early in the month damaged late garden truck. Due to the dryness of the soil pastures, ranges, and harvested fields yielded less than the usual feed for livestock and considerable yard feeding was necessary.

November.—Stormy periods prevailed from the 3d to the 10th and from the 21st to the 25th. Generally fair and warmer weather during the remainder of the month allowed livestock to range freely in most sections, but considerable yard feeding was necessary in the eastern portion.

December.—From the standpoint of comfort to both humans and livestock the weather of the month was decidedly unfavorable, the temperature being below normal and the snowfall being above the average. Much yard feeding of livestock was necessary.

Killing Frosts
